Turn 125

Turn Table

The table turn device Turn 125 is characterized by a very low weight and also small construction dimensions. A hollow shaft of 16 mm and screw-on possibilities of mechanical parts, allow the construction of a forming-mechanism.

The device can be arrested in several positions (90° to 180°). This tool is particularly adequate for welds of small and light components. By using an hydraulic 3xd chain-arm, the torch can be adjusted at will.

Several engine- and connection cables allow the operation on systems of our competitors (Arc Machines, Orbitalum, Orbitec etc.).

In addition a two-way support can be installed, so that the fine-adjustment of the electrode-position can be done very comfortable. The fitting of a cold wire-holder is also guaranteed.

DATA //

Input supply voltage	24 V DC
Dimensions L x W x H (mm)	300 x 275 x 230 [without profiles, with torch holder]
Weight (kg)	16
