

# Instruction Guide: Preparing Coco Husk Chips

**Materials Needed:**

- 5kg compressed coco husk chips block
- Large container or bucket (capacity: 65–70 liters)
- Approximately 65–70 liters of water
- Stirring tool (e.g., garden trowel or stick)

**Steps:****1. Select a Suitable Container:**

- Choose a container that can hold at least 70 liters to accommodate the expansion.

**2. Hydrate the Coco Husk Chips:**

- Place the compressed 5kg block into the container.
- Gradually add 65–70 liters of water, ensuring even distribution over the block.
- Allow the block to absorb water for 30–45 minutes.

**3. Break Apart and Mix:**

- After soaking, use a stirring tool to gently break apart the softened block.
- Mix thoroughly to achieve a uniform, loose consistency.

**4. Drain Excess Water (if necessary):**
