

SOT Testimonial

-Dr. Tristin Wallace, ND

I first began to see SOT's miraculous-seeming effects in a breast cancer case. One case that stands out distinctly is a young professional lady who, being so young, had actually been turned away for mammogram coverage. She came to me with no conventional diagnosis, but by the time she stepped into my office, her breast had already been twisted into a hardened, stump-like shape. She was of course very concerned about the health of her breast.

Having been trained in naturopathic medical school, I immediately recognized the breast shape changing could indicate cancer. Thankfully, RGCC's sensitive cell count test identified her circulating malignant breast cancer cells. RGCC made SOT for her based on her cancer's especial DNA fingerprint. The results after administering SOT were quite dramatic and I couldn't have been more pleased.

Not only did her cell count decrease, but the SOT acted on the cancer mass, destroying it, and she was able to feel the SOT working. Her breast inflamed, and she reported headaches to me, and knee swelling, indicating apoptosis of cancer cells in the breast and in other, previously unsuspected places.

We felt reassured knowing the SOT was finding cancer and destroying it, even though we hadn't realized it was in those places. The inflammation and knee swelling were not comfortable, and she was in bed a few days with the knee pain. But the SOT didn't cause nausea or hair loss, or hurt any tissues other than those directly impacted by the cancer growth.

Most amazing of all was after the SOT had been active in her body for about six months, she revealed that her breast had regained its healthy, original shape. All that remained of the previous mis-shaping was a light red line on her now-normal skin, where the SOT was still active, months after it had been administered.

SOT is groundbreaking, next-level medicine. It's such a privilege to be able to administer this in my clinic.
