

Clockwork Pools

The "What's Wrong with My Pool?" Symptom Solver

Symptom: Green Water / Slime

- **Likely Cause:** Algae growth

- **Quick Fix:** Heavy shock, brush walls thoroughly, and run the filter 24/7 until clear.

Symptom: Cloudy or Milky Water

- **Likely Cause:** Poor filtration, high pH, or early-stage algae.

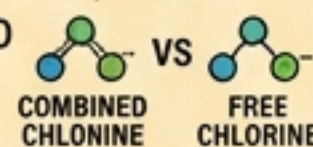

- **Quick Fix:** Check filter pressure (backwash/clean if high), test and lower pH if needed, and check chlorine levels.

Symptom: Strong "Chlorine" Smell

- **Likely Cause:** High chloramines (combined chlorine), meaning there is too little free chlorine to fight organic waste.

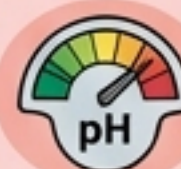

- **Quick Fix:** The pool actually needs to be shocked to burn off the organics and break up the chloramines.

Symptom: Burning Eyes & Itchy Skin

- **Likely Cause:** Out-of-balance pH or high chloramines.

- **Quick Fix:** Test and adjust pH to the 7.4–7.6 sweet spot.
