# Phenolic Lockers

**Accu Tec Manufacturing's Solid Phenolic lockers** are fabricated to the exact specifications and needs of each customer. Our lockers are made out of solid phenolic core using multiple resin-impregnated Kraft, color, and clear Melamine surface sheets fused and pressurized at high temperature. The result: highly durable, anti-fungal, easy to clean, and easy to maintain solid phenolic lockers. Although there are "standard" locker dimensions, we are able to manufacture and assemble any and all desired locker configurations with specific dimensions. Moreover, we have a wide assortment of configurations ranging from the simple "one-tier" to the more multi-use "six-tier" solid phenolic locker. In addition, all solid phenolic lockers can be color-coordinated or mix and matched according to the specific needs or aesthetic desires of any customer. Every solid phenolic locker has a distinct non-porous surface, frameless doors, durable hinges, and stainless steel fasteners. Due to their non-porous surface, these solid phenolic lockers are ideal for areas where there is water and moisture, such as fitness clubs, swimming pool areas, and shower rooms.

\* All color selections and options are also available on cubbies and benches.

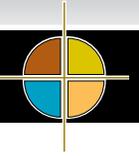

**Standard Locker heights:** 36" 60", & 72"

**Standard Locker widths and depths:** 12", 15", 18" & 20"

**Standard Cubbie heights:** 48"

**Standard Cubbie widths and depths:** 12", 15" & 18"

# Popular Styles

**Lockers with a cubbie base and bench top** are another style of locker that we, at **Accu Tec**, manufacture. Cubbies, like the ones shown to the left, are an ideal add-on for any solid phenolic locker. These are also fabricated to the exact needs and requirements of our customers. Moreover, these storage units are also manufactured with durable and easy to clean solid phenolic material.

The **"Z"-style** solid phenolic locker is a multi-functional and extremely practical locker. This "Z"-style solid phenolic locker has a built in shelf that offers an alternative to the mundane square-shaped storage locker. These solid phenolic lockers come standard with a double pronged heavy duty hook inside at the top and one heavy duty single hook on each side in the interior, which are perfect for hanging lab coats and even tough fireman jackets.

# Endless Configurations

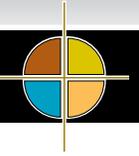

The “**three-tier**” solid phenolic locker is a three level storage unit comprised of three separate lockers, each with its own locking mechanism. Due to its three level compartments, this locker is extremely useful in places where there is a limited amount of space and a need for a substantial quantity of storage units. Doors can be color coordinated and easily replaced to change the “look” of the locker without the need to replace the frame.

The “**two-tier**” with **Slope Top** style solid phenolic locker is a bi-level locker with two individual storage compartments, each with its own lock. This style of solid phenolic locker is among the most used and requested due to the size of each locker compartment and its amount of storage space. Able to fit a wide variety of objects and clothing articles, from backpacks to coats, this type of locker is perfect for gyms, high schools, and hospitals. Moreover, the added slope top prevents the locker user from storing objects or clothing articles on top of the storage unit.

# ADA Lockers & Benches

At **Accu Tec** we also manufacture solid phenolic lockers that are required to meet the variety of ADA specifications present in the industry today. **ADA lockers** can be outfitted with a large and easy to see handicap decal as well as handles that are easy to grasp. For even more practical use the ADA locker can also be outfitted with a Digilock, an ADA friendly locking mechanism. Lastly, the bottom shelf in each ADA locker is adjusted to a level where it can be reached from a seating position.

**Accu Tec's solid phenolic benches** are suitable for gyms, hospitals, and essentially anywhere there is a need for people to sit down while accessing their lockers. Perfect for both wet and dry areas, solid phenolic benches are an ideal addition to any locker room. **Ventilation systems**, are also available on all lockers and are ideal for areas where odor, water and moisture are present since it helps the lockers "breathe". Moreover, the vents reduce the chances of mold growth while also improving the air flow freely through the solid phenolic locker.

# European Legs

# Locking Mechanisms

## DigiLock:

Design allows for user to secure their belongings with a self-selected password. Designed for lockers that are shared by multiple users throughout the day. Excellent for use with ADA required lockers.

## Swivel Lock:

Similar to the hasp lock since it also allows locker user to utilize their own lock. Ideal for use in areas with day-use lockers such as health clubs, schools, and employee areas.

## Keyless 1:

Perfect for shared-use environments or single-user locations where users do not wish to carry keys

ADA version available

## Hasp for Padlock:

Allows customers, employees, or students to use their own locks. This type of lock also features a protective plate that prevents doors from being scratched by padlocks.

## Key Lock:

Easy to use locking system that provides a high level of security. Ideal for use in health clubs and employee lockers where an administered locker security system is required.

## Built-in

## Combination Lock:

Designed for facilities with rented or assigned lockers and features an easy to dial three digit combination with a master key override.

# Plastic Laminate Lockers

**Accu Tec Manufacturing's Plastic Laminate lockers** are modern, practical, and most importantly cost efficient. These can be manufactured in the same styles as our previously shown solid phenolic lockers. Our plastic laminate lockers can also be fabricated from 100% post consumer recycled material, for those "green" needs or requirements. Any plastic laminate color manufactured by the various laminate companies in the industry are available for our plastic laminate lockers. These types of lockers can also be manufactured to any specific size required or desired. However, plastic laminate lockers are not recommended to be used near any wet areas or areas with a great level of moisture or humidity since this can result in delamination or expansion of material. On the other hand, our durable, convenient, and aesthetically pleasing plastic laminate lockers are ideal for dry areas in schools, offices, health clubs, as well as for budget pricing.

\* All color selections and options also available on benches and cubbies

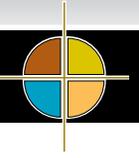

**Standard Locker heights:** 36" 60", & 72"

**Standard Locker widths and depths:** 12", 15", 18" & 20"

**Standard Cubbie heights:** 48"

**Standard Cubbie widths and depths:** 12", 15" & 18"

# Custom Size Lockers

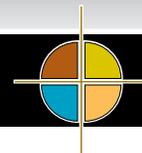

At **Accu Tec Mfg**, we also fabricate **customized lockers** for those singular needs or requirements. These custom sized lockers usually deviate from the normal and mundane locker configurations and can be completely outfitted with any of the accessories and locking mechanisms previously shown.

Select from more than 500 colors and textures from the most recognized laminate companies .
