Power-Pole® moves into deep water.

Introducing the Power-Pole Drift Paddle™

Power-Pole shallow water anchor, the advanced hydraulic anchor system that's famous for boat control is changing the world of fresh and salt water fishing again. By adding the Power-Pole Drift Paddle accessory suddenly there is drift control and accuracy that anglers have dreamed about. It's a whole new species of deep-water control.

The Power-Pole Drift Paddle comes with all the hardware to easily install on any 8' or 10' Power-Pole anchor at the dock or while on the water. It features seven quick-change locking positions to give you complete and easy course correction. The Drift Paddle enables you to change the bow angle from port to starboard or even sideways. It slows the boat up to 50% and because it attaches to the Power-Pole anchor you can slow the boat at the touch of a button while you continue to cast without interruption. At the end of a drift simply retract the Power-Pole, which lifts the Drift Paddle completely out of the water, then motor back to your start position, deploy the paddle and make another pass. It also allows you to dramatically shorten the turning radius of your boat so you can follow shore contour lines more tightly and work a zone more effectively. Best of all, the Drift Paddle works perfectly with your main motor giving you speed reduction so precise and effective you may not need that kicker motor at all.

The Power-Pole Drift Paddle is made from UV stable material giving it long life. The paddle also flexes with the Power-Pole spike so they flow and work together perfectly. They also reduce boat rocking to give you even more stability in heavy wind. And on top of all this, it still allows you to effectively use the Power-Pole for anchoring in shallow water even with the Drift Paddle installed.

For the ultimate in boat control use dual Power-Pole anchors and Drift Paddles, it's like your whole boat evolved into a new species of predator.

For more information on the complete line of Power-Pole shallow water anchors and accessories, go to www.power-pole.com

Features

- More accurate angle and speed control than a drift sock
- Slows your boat by up to 50%
- Quickly change bow angle and drift direction from port to starboard
- Works with your main motor for light trolling
- Easy on and off at the dock or on the water
- Fits any 8' or 10' Power-Pole shallow water anchor
- 7 quick-change locking positions for fast angle adjustment
- Maintains drift angle and keeps boat steady
- Drift and steer with absolute stealth silence
- Retracts quickly, rotates to 90° for running on the water or trailering on the highway
- Allows continued use of the Power-Pole spike for anchoring
- Use in fresh or salt water
- All installation hardware included
- Made in the USA

Seven quick-change locking positions sweep a full 180° in 30° increments.

Single Port or Starboard Drift Paddle

Dual Drift Paddles

Specifications

Boat Size:	Up to 25ft or 4500 lbs
Deployment depth:	Up to 8 or 10ft (depending on Power-Pole anchor depth)
Rotation:	7 Locking Positions that sweep a full 180° in 30° increments
Weight:	4.75 lbs
Paddle Size:	Height: 46" Width: 5" at top / 15" at bottom Thickness: .25" Surface Area: 455.5" ^ 2
Material:	Starboard - Space-age Polymer (UV stable) Marine Grade Anodized Aluminum Bronze Bushings Stainless Steel Spring and Ball Detent Pin (quick release)
Color:	Matte Black
Installation Hardware:	Included
Warranty:	2-year warranty
