HOW TO MEASURE YOUR SPACE

Having a full set of measurements enables our designers to get a better understanding of what you are wanting. The designer will still need to make precise measurements to ensure a perfect fit to your area, but this is a great 1st step. It's easy, you just need a pencil, paper and a tape measure....an extra set of hands helps to hold the tape measure too!

1. Find Your Space - Measure the length of every wall that is relevant to the space you are looking to customize. Don't forget to measure the ceiling height.

2. Appliances – If you are doing a renovation and keeping your appliances in their exact locations, all you will need to the designer is the centerlines.

3. Windows/Doors – Find the height, width and the centerlines of all doors, windows and cutouts in the area.

When you are done measuring and drawing, you should have something that looks similar to this:
