Sale Order

All Red Angus bulls will sell at 1p.m. in catalog order. Simmental bulls to follow starting at approximately 1:45 p.m. with alternating lots between Flittie and Schnabel bulls. Sale order will be on the supplement sheet posted on DVAuction 12 hours before the sale.

Trucking

Haul your purchase on sale day and receive a \$100 discount.

Delivery

Delivery will be available at the least possible cost to the buyer

Feeding

Bulls will be fed free of charge till March 15th. After that there will be a \$4/day/head charge.

Retained Interest

One-third semen interest will be retained by the consignors.

Online Broadcast

The sale will be broadcast live on:

Welcome to our 2025 production sale. What a year 2024 has been to be in the cattle business. It seems like every week we hear about another record price being broken. We had excellent moisture this summer which led to abundant hay, pasture and crops. The only downfall to all the moisture over the summer was our weaning weights were down a little from the grass being so lush, but I'd rather have that than dealing with drought conditions. It's been a busy year between chasing the kids around throughout various sports seasons, 4-H activities, and managing all the cattle and crops. We are a family operation and all 4 of our kids are always out helping and

developing a passion for the cattle and for our newest adventure of starting a small herd of registered Boer goats (thanks to some extra nudging from Steph over the years).

We focus very hard on having a strong maternal cow herd. We want cows that are functional and low input yet maintain proper body condition. I always say you can't build a house on a weak foundation, and I feel that is the same for a cow herd. You need a solid foundation to develop cattle that will be functional and marketable. We do NOT creep feed any of the calves, as we expect them to grow and excel with mother's milk and grass alone. Disposition is EXTREMELY important to us with the kids always with the cows.

The bulls are being fed similar rations that we have used for the last few years developed by Blair Andrews at Dakota Plains Feed and Grain in Hecla, SD. She has developed rations to achieve maximum growth while keeping the bulls athletically sound and to have longevity. The rations this year are using a combination of earlage, corn silage, ground oats hay, ground alfalfa hay, and RIO backgrounder loose mineral. They are currently eating only 24# as fed (12.6# DMI), we might sacrifice a little in ADG but feel we will have better longevity. All our feedstuffs are 100% homegrown. They also always have free choice salt and Rio Nutrition tubs.

All cattle are on a strict herd health program put together with the Hosmer Vet Clinic (Dr. Holly Roe Johnson 605-283-2278).

All bulls are DNA tested with genomically enhanced EPDs, parent verified, coat color, horn/poll, ADG, adj. YW, carcass ultrasound, and scrotal measurements. Supplement sheets will be available sale day for any information that didn't make the catalog.

Again, this year we will be retaining 1/3 semen interest on all the bulls. You will be buying full possession and 2/3 semen rights.

Thank you for your interest in our program. Please feel free to contact us at any time, follow us on Facebook, or visit our website www.srsimms.com to learn more about the cattle. Visitors are always welcome to view the bulls prior to the sale.

Thanks,

*Tom & Meghan Schnabel, Schnabel Ranch Simmentals
Peyton (15), Mallory (13), Danyelle (12), Korbryn (9)*

Welcome

It is an honor to have you take the time to look through our 2025 catalog. This past year we celebrated 70 years of the Red Angus Association, a cornerstone breed known for quality genetics, maternal traits, and adaptability in the cattle industry. These bulls represent years of dedicated breeding selection with a focus on traits that truly matter – fertility, maternal, growth and carcass quality. This year's lineup frankly speaks for itself. Top-notch genetics with proven performance ready to take your herd to the next level. If you need to add a notch of frame size, growth, or maternal quality, we are confident you will find what you need at this sale.

We spend a vast amount of time thinking about what you, the customer, want and need. You and your operations are important to us. We try to find the bulls to keep those of you whom market by the pound profitable while keeping balanced traits in mind for those that market cattle on the rail and keep genetics for those of you who retain heifers. Red Angus cattle have forever been known for their maternal abilities and always will be but that does not mean they cannot hang a prime carcass on the rail. This set of bulls have genomic enhanced EPDs, carcass ultrasound data and are parent verified so you can rest easy knowing they are what we say they are. The work is all done. Now you just need to pick what works for you. We have all their actual performance data available upon request. We would love to talk cattle (or goats...hahaha!) with you and help you make your investment decisions.

We will have video footage of the bulls the week prior to the sale. The bulls will be at Hub City Livestock on Friday before the sale for you to sort through. You are always welcome to swing by the Ranch prior to sale weekend to see them as well. We have already had several visitors see the bulls at the ranch and they have all stated how impressed they are with foot quality and uniformity in the offering. These bulls have been on a strict herd health program. We can keep the bulls after the sale for a limited time, but you need to be in contact with us to let us know if we need to bring them home from the auction barn. We feed them free until March 15th after that you may be invoiced for feed and bedding costs. We do our best to coordinate delivery at the least possible cost to the buyer.

The Red Angus bulls will sell at 1 p.m. in catalog order. The Flittie and Schnabel bulls will sell immediately after the Red Angus, approximately 1:45 p.m. Sale Supplement sheets will be available for all breeds on sale day, on our website, DVAuction and our Facebook pages.

Hope to see you on sale day. If not you are always welcome to stop in for a visit! As always, do not forget about our goat sale April 26, 2025, broadcast live on DV Auction.

Sit down, buckle up and buy Red! I am confident we will have some exciting times ahead!

Steph and the Crew at Lazy J Bar Ranch

John, Kale and Jacob

Welcome to our 2025 Simmental Bull Sale

I listened to the market report from Aberdeen Livestock for the Monday sale while I was doing chores this morning and they said feeder cattle were \$3-7 higher than last week. It's a great time to be in the cattle business.

Our calves were weaned on November 1st. They took right off on feed and are doing really well. The calves do not get creep feed, the weaning weights come from grass and milk. Cattle are on a herd health program from the Hosmer Veterinary Clinic (605-283-2278).

All the bulls have been DNA tested with genomically enhanced EPDs, parent verification, coat color, and horn/poll. All the info plus ADG, yearling weights, and scrotal measurements will be on supplement sheets before the sale the first part of February.

If you have questions before the sale, feel free to call. You are welcome to view the bulls at the ranch anytime. Bulls will be at the sale barn Friday afternoon.

As always, thank you for your interest.

Bruce Flittie, Flittie Simmentals

ALLOWING YOU ACCESS... All value creation starts with great genetics and every genetic purchase must provide the potential to enhance profitability to this industry. With the expansion of our genetic improvement and customer service opportunities, the Allied mission continuously improves and moves closer to its goal of making our customers more successful and the beef business a more profitable and thus sustainable industry for the future.

You can count on genetics purchased from Allied partners to be the very best in this business, backed by a growing family of Allied service offerings to back that value proposition.

Allied Feeding Partners, LLC and Feeder Cattle Marketing: Cattle generated by Allied owner's customers just have more genetic potential to create profit and we are committed to proving it. Contact Clint Berry 417-844-1009 at Allied Feeding Partners for more information on how to participate in AFP or take advantage of Allied's growing feeder cattle marketing services and value creation opportunities.

All Beef, LLC and Allied Semen and Genetics: Check out our Allied Sire Directory and our industry partner offerings of All Beef sires. Simply the most comprehensive and commercial focused line-up of SimGenetics available. See too our growing list of prime Red Angus and Angus options. Rocky Forseth 406-590-7984

Data Genie: Fast, efficient data services from an experienced data manager can be among the most difficult to access in this business. Talk to Leoma Wells 559-696-4941 about her options for proven information services.

Allied Seedstock Marketing: Corey Wilkins 256-590-2487, Julie Murnin and rest of the genetics marketing team provide the most professional and customer focuses seedstock marketing options available, all backed by the growing list of Allied commercial customer service options.

RightMate, RightChoice and Future Focus Genetic Planning: New and game changing genomic technology powered by Top Genomics LLC combined with experienced consulting to get the most from these options and your genetic investment. The future will demand better genetics, so let's make a plan. Contact Marty Ropp 406-581-7835 for great opportunities.

At the core of the Allied family of businesses is access to the very best genetics and customer service in the beef industry. Becoming full service genetic providers has always been our goal, because it's always been important.

Sale Information

Sale Terms & Conditions

TERMS: Terms of the sale are cash, check, sight draft or other terms agreed to in writing between seller, buyer, and sale manager payable immediately upon conclusion of the sale and before animals will be moved. Sale manager reserves the right to require a certified check as settlement before releasing any cattle.

PURCHASER'S RISK: All animals are the owner's risk prior to their sale and become property of the purchaser as soon as declared sold by the auctioneer.

BIDDING: Any disputes or challenges regarding bids or tie bids will be settled by the auctioneer and his decision will be final.

ANNOUNCEMENTS: Any errors or changes in information contained in the catalog will be announced from the auction block and such announcements shall take precedence over information contained herein.

HEALTH: All animals are eligible for interstate shipment. Interstate health papers prepared by an accredited veterinarian will be furnished on each animal sold. Arrangements for International Shipments should be made with the sale manager prior to the auction.

All efforts for the exportation of cattle can be arranged through sale management.

BREEDING GUARANTEE: All animals are guaranteed by the seller as outlined by the American Simmental Association. Guarantees will be handled on an individual basis, with credit towards another animal.

LIABILITIES: All persons who attend the sale do so at their own risk. The seller, Hub City Livestock, and sale manager assume no liability for any accidents that may occur. Neither does the seller, Hub City Livestock or sale manager assume any liability for loss or injury to livestock due to theft, mysterious disappearance, sickness, improper handling or Act of God. It is to be clearly understood that the sale manager and its representatives act only as a medium between the buyer and seller. They are not responsible in any way for the failure on the part of the buyer and seller to live up to his obligations or for the truth of any warranties or representation, express or implied. Neither does the sale manager assume any financial obligations to collect or enforce collection of monies between parties. Any legal action, that may in exceptional cases be taken, must be between the buyer and seller. This catalog has been prepared by the Sale Manager from pedigrees and information supplied to them by sources deemed reliable; however, the Sale Manager will in no way guarantee the pedigree, percentage of the animals selling, or data included in this catalog. Any exceptions taken are between buyer and seller.

CONTRACT: The above terms and conditions of sale shall constitute a contract between the buyer and seller of each animal and shall be equally binding upon both. Each sale or resale of an animal constitutes a separate transaction.

MAIL BIDS: Mail or wire bids may be furnished. Bids must be in the hands of the sale manager in ample time prior to sale date and will be handled in strict confidence.

PHONE BIDS: Telephone bids will be taken by the sale manager and will be treated in strict confidence. Sale day phone numbers are:

BULL BUYER'S QUICK GUIDE TO ASA EPDS AND \$ INDEXES

Expected Progeny Differences (EPDs): EPDs are the most accurate and effective tool available for comparing genetic levels. In using EPDs, the difference between two sires' EPDs represents the unit difference expected in the performance of their progeny. For example, if sires A and B have EPDs of +10 and -5, a 15-unit difference would be expected in their progeny (moving from -5 to +10 yields 15 units). Key to using EPDs is knowing what units they are expressed in. For example, if the above case referred to weaning weight EPDs, A would be expected to sire 15-percent more unassisted births in first-calf heifers; in other words, if B sired 30 assists in a group of 100 heifers, we'd expect A to require 15 assists.

A percentile-ranking chart is required to determine where a bull's EPDs rank him relative to other bulls in the breed. For percentile rankings or more detailed information about EPDs and \$ indexes visit www.simmental.org.

\$ Indexes: Though EPDs allow for the comparison of genetic levels for many economically important traits, they only provide a piece of the economic puzzle. That's where \$ indexes come in. Through well-conceived, rigorous mathematical computation, \$ indexes blend EPDs and economics to estimate an animal's overall impact on your bottom line. The same technology that led to the dramatic progress in swine, poultry and dairy genetics over the last several decades was used to develop the following \$ indexes:

All-Purpose Index (API): Evaluates sires for use on the entire cow herd (bred to both Angus first-calf heifers and mature cows) with the portion of their daughters required to maintain herd size retained and the remaining heifers and steers put on feed and sold grade and yield.

Terminal Index (TI): Evaluates sire for use on mature Angus cows with all offspring put on feed and sold grade and yield.

Using API and TI: First, determine which index to use; if you're keeping replacements use API, if not, TI. Then just as with EPDs, zero in on the unit difference between bulls. (As described above, index units are in dollars per cow exposed.) The difference can be used to determine how much a bull is worth compared to another. Or, put another way, how much you can pay for one bull compared to another. For example, when buying an all-purpose-type sire, you can quickly figure a bull scoring +100 for API is worth an extra \$6,000 over a \$50 bull if both are exposed to 30 cows over 4 years (\$50 diff. x 30 hd. x 4 yr. = \$6,000). A percentile-ranking chart is required to determine where a bull's index value ranks him relative to other bulls in the breed. For percentile rankings or more detailed information about EPDs and \$ indexes visit www.simmental.org.

Explanation of How to Utilize API and TI Indexes

First, determine which index to use; if you're keeping replacements use API, if not, TI. Then, just as with EPDs, zero in on the unit difference between bulls. (As described to the left, index units are in dollars per cow exposed.) The difference can be used to determine how much a bull is worth compared to another. Or, put another way, how much you can pay for one bull compared to another. For example, when buying an all-purpose-type sire, you can quickly figure a bull scoring +100 for API is worth an extra \$6,000 over a \$50 bull if both are exposed to 30 cows over 4 years (\$50 diff. x hd. x 4 yr. = \$6,000). A percentile-ranking chart is required to determine where a bull's index value ranks him relative to other bulls in the breed. For more information, visit www.simmental.org.

Definitions of Terms

Expected Progeny Differences (EPDs): EPDs are the most accurate and effective tool available for comparing genetic levels.

Back Fat (BF): Inches of backfat.

Birth Weight (BW): Pounds of birth weight.

Calving Ease (CE): Percent of unassisted births when used on heifers.

Carcass Weight (CW): Pounds of carcass weight.

Maternal Calving Ease (MCE): Percent of unassisted births in first-calving daughters.

Milk (MLK): Pounds of weaning weight due to milk.

Marbling (MRB): Marbling score.

Maternal Weaning Weight (MWW): Pounds of weaning weight due to milk and growth.

Ribeye Area (REA): Square inches of ribeye.

Warner-Bratzler Shear Force (WBSF): Pounds of force required to shear a steak.

Stayability (STAY): Percent of daughters remaining in the cowherd at 6 years of age.

Terminal Index (TI): Dollars per cow exposed under a terminal-sire scenario.

Weaning Weight (WW): Pounds of weaning weight.

Yearling Weight (YW): Pounds of yearling weight.

Yield Grade (YG): Yield grade score.

TESTICLE MEASUREMENTS

Testicular size is an indicator of puberty in both bulls and females, so selecting bulls with larger scrotal circumference measurements will not only ensure you of a bull who can service more cows over a given period of time, but will also provide you with daughters who will cycle earlier.

Recommendations for Scrotal Circumference

	Months of Age			
	12-14	15-20	21-30	30+
Excellent	35	37	39	40
Good	30-35	31-37	32-39	33-40
Poor	30	31	32	33

All measurements are expressed in centimeters.

GENOMICALLY ENHANCED EPDS

All the bulls of both breeds have been genetically profiled through Igenity to enhance the accuracy of their EPDs, verify parentage and, on the Simmentals, determine polledness and color.

RED ANGUS GUIDE TO EPDS RedAngus.org

ProS Profitability and Sustainability is an all-purpose index that predicts average economic differences in all segments in the beef supply chain. This index is a combination of the breeding objectives modeled in the HerdBuilder and GridMaster selection indexes. In this index, replacement heifers are retained from within the herd and all remaining progeny are fed out to slaughter and sold on a quality-based grid. Traits included in this index include calving ease, growth, HPG, STAY, Mature Weight, Dry Matter Intake and carcass traits. The resulting index is expressed in dollars per head born (Index/High Value).

HB HerdBuilder is a maternal selection index that predicts the economic differences of animals for traits that are important from conception through weaning. Expressed as dollars per head born, HB is calculated based on the scenario that bulls are mated to heifers and cows, replacement heifers are retained and all remaining progeny are marketed at weaning. Traits included in the HB index include Calving Ease Direct, Calving Ease Maternal, Weaning Weight, Milk, Mature Weight, Heifer Pregnancy and Stayability (Index/High Value).

GM GridMaster is a selection index that predicts the average economic difference of non-replacement calves through the post-weaning phase of production. GM places selection pressure on growth, feedyard performance and carcass traits. Expressed as dollars per head born, GM is calculated based on the scenario that progeny are fed out to slaughter and marketed on a quality-based carcass grid. Traits included in GM include Average Daily Gain, Carcass Weight, Dry Matter Intake, Marbling, Back Fat and Rib Eye Area (Index/High Value).

CED Calving Ease Direct predicts differences in the percent of calves born unassisted out of 2-year-old dams. (Percent/High Value)

BW Birth Weight predicts differences in actual birth weight of progeny. (Pounds/Low Value)

WW Weaning Weight predicts differences in 205-day weaning weight. (Pounds/High Value)

YW Yearling Weight predicts differences in 365-day yearling weight. (Pounds/High Value)

ADG Average Daily Gain predicts differences in weight gain between 205 and 365 days of age. (Pounds/High Value)

DMI Dry Matter Intake predicts differences in daily feed intake as measured in a feedlot during the post-weaning period. (Pounds/Low Value)

MILK Milk predicts differences in weaning weight attributed to the milking ability of the animal's daughters. (Pounds/High Value)

ME Maintenance Energy predicts the difference in maintenance energy requirements. (Mcal per Month/Low Value)

HPG Heifer Pregnancy predicts differences in the percent of daughters who are able to conceive and calve at 2 years of age following exposure to breeding. (Percent/High Value)

CEM Calving Ease Maternal predicts differences in the percent of daughters who are able to calve unassisted as 2-year-old heifers. (Percent/High Value)

STAY Stayability predicts differences in the ability of an animals' retained daughters to remain productive in the herd – calve every year – through 6 years of age. (Percent/High Value)

MARB Marbling predicts differences in marbling score – amount of intramuscular fat measured at the 13th rib. (Marbling Score Units/High Value)

YG Yield Grade predicts differences in USDA Yield Grade, which is calculated using CW, REA and Fat. (Yield Grade Units/Low Value)

CW Carcass Weight predicts differences in actual hot carcass weight. (Pounds/High Value)

REA Ribeye Area predicts differences in square inches of ribeye area measured at the 13th rib. (Square Inches/High Value)

FAT Fat predicts differences in the depth of backfat measured between the 12th and 13th ribs. (Inches/Low Value)

Youngest calf in the sale. Heterozygous Black.

BETTER. STRONGER. FASTER.

RightMate

powered by TOP GENOMICS

BETTER. Revolutionary results. Maximum benefit from every breeding decision.

STRONGER. Harness the full power of genomic technology.

FASTER. Drive genetic improvement and promote consistency at a rate never before possible.

RightChoice

powered by TOP GENOMICS

BETTER. Simplified bull buying with maximum profit impact.

STRONGER. Confidently and securely match genetic choices with your needs.

FASTER. Makes cutting edge genomic technology quick and easy to use.

"A year of seedstock herd validation is proving multiple generations of genetic progress in a single mating cycle AND substantially reduced calf crop variation. Give us a call today for more details."

- Marty Ropp, Allied Genetic Resources

Confidently choose the logoed group that matches your needs, then just pick the bulls you like:

ACCREDITED GENOMIC PLUS – For the majority of producers who simply need consistent and balanced genetic improvement, without genomic setbacks, G+ Accredited bulls should be on your list for premium purchase.

These sires will absolutely move you forward for both cost reduction and income producing traits and substantially reduce risk when compared to other evaluation programs.

ACCREDITED TERMINAL MATE – Just like an ATM machine makes it simpler to access your cash, the ATM Logo highlights bulls accredited to generate extra cash income as soon as your next calf crop! These bulls are meant specifically

to use only on mature cows and for the purpose of adding performance, pay weight and end product value to market.

ACCREDITED CALVING EASE – Simply find bulls with the ACE logo for third party Accredited, secure Calving Ease bulls. The reduced risk that comes with this genomic certification will simply make your decisions easier and your

heifer calving season more successful. Purchase special purpose ACE bulls with confidence. They will deliver consistent and predictable calving ease.

You invested in genomics. Take the technology to the next level.

RightMate and RightChoice scoring is available to ALL breeders.

Top Gun was a bull we bought a couple years ago from Rydeen Farms and unfortunately lost due to a broken leg so we don't have many calves this year by him. We did AI very heavily to him so we look forward to many more next season. This is a very well-balanced calf. He has 14 EPDs in the top 35% and 109 WW ratio.

Precision genomic selection tools FOR THE FUTURE of commercial beef production

Many of you have seen the unprecedented results created by the RightMate and RightChoice tools for precision matings in the beef genetics industry. Now, Top Genomics offers tools that use the same, cutting-edge technologies, but in a format that is better suited to the way most commercial herds breed cows.

With a genomic snap-shot of your commercial cow herd, it is possible to sort a group of sale bulls or AI candidates to best match your particular situation and wishes. RightBull provides substantially more insurance of success than just paging through a catalog or walking from pen to pen. Ultimately, you make the decisions from the prescribed short list based on the traits and factors you prioritize.

Additional Options

- Choosing ideal heifer bulls is great strength of the RightBull and RightMate technologies.
- Top Genomics can sort females in your herd into more similar groups making bull turn out more precise.
- Genomically sort the cow herd into desired outcome groups, then prescribe special purpose bulls.
- RightBull is also available for seedstock providers wishing to purchase genetics.

The PROCESS

- 1 Access, if genotypes are currently available, or genotype a minimum of 25% of the existing cow herd (25 head minimum in cow herds <100). This minimum percentage may differ slightly depending on group sizes and total females to mate, but the more females genotyped the more accurate the evaluation. For some this will be a decision to genotype the entire herd or at least all of the young females. The information delivered to Top Genomics must be in the form of raw genotypes and not genomic scores (please contact Allied for questions) in order to get the core information needed for RightBull.
- 2 Get permission from you seedstock provider to access to the bull genotypes and EPDs, then transfer that information along with the genotypes of the cow herd to Dr. Mahdi Saatchi at Top Genomics, LLC. If he already has those genotypes, this process is even easier.
- 3 Participate in a conversation with staff regarding your mating plans and breeding objectives so that the results can be better customized to your management practices and genetic goals.
- 4 Top Genomics will provide you a RightBull ranking and %Genomic Match for bulls in that particular offering for you to use as an important "first sort" in preparation for purchase.
- 5 Please allow 5-8 weeks from the time you collect DNA samples to expect results, but just 2 weeks for the RightBull evaluations to be completed if your cow's genotypes are already available.

One of Jacob's personal favorites in the offering. This dude packs a punch. Put him on the profile and enjoy the view because they don't get much better than this guy. He comes at you with a neat front and deep body, he's as sound as they come. He wraps all that up with a good foot and excellent bone structure. When you step in the pen with this guy on sale day, you'll know exactly who he is!! Backed by a different pedigree than some of our bulls. He has the length, style and performance to make a nice addition to anyone's operation.

Lot 304 and 305 are twins raised by their own dam all summer. She did a whale of a job with these two. They are so similar in type and kind. Sired by the ever-popular, high selling bull in the 2022 Bieber sale and backed by the "good ol' mama cow" family originating back to the Ed Artz herd. This mating was no mistake, it was carefully planned. I was just hoping for a heifer calf instead.

You may notice that we have put a little more emphasis on carcass traits the past couple years, which of course may appear to sacrifice some maternal traits on paper. However, these bulls are picked out by the cow families that have always produced for us.

If you need frame size, length or capacity added to your calves, then this extra-long, deep bodied boy is for you. He is backed by the top cow families from the Bieber herd on the sire side and of course is one of Steph's favorite Ed Artz bloodlines on the maternal side. I wouldn't let his extra birthweight turn me away. He was a few days overdue at birth and this cow line has never needed any birth assistance. If you want yearling weight pounds to increase then don't leave the sale without him!

This guy goes back to Jacob's first official show heifer who had a hell of a career. He is moderate but don't let that scare you away from all the pieces this guy has that will impact your herd. It's hard to make one with such a freaky neck and that much bone, but this guy's cow family has done it every year. This guy has the potential to go make show heifers and then hang a carcass on the rail, especially when mated to the right female.

This is the calf most everyone has to stop and take a look at. He has eye appeal and style but holy cats is he deep and wide. High Capacity has long been known for his growth traits and of course the Primrose cow family needs no introduction. This is the type of calf we were looking for when we did the ET mating, the only thing wrong is it came out as a bull.

Another bull that will add growth to your herd, are you seeing a trend yet? Backed by the ever-popular Abigrace cow family and Steph's favorite little Brown cow that we had here for ten plus years and has generated more revenue than most. Maternal, growth and carcass – don't sit back on your hands and let this one get by you.

We picked this Dividend bull as our pasture service sire to hopefully inject a tick more frame, growth and carcass attributes. He certainly did all those things, but not only that – this calf's sire is a breeding machine. He serviced 42 head of cows his yearling year at our place.

This bull and Lot 327 would be full sibs on paper. The dams are flush sisters. The Maximus bulls we have had in the past have grown up to be impressive herd bulls.

Again, Steph was really hoping for a heifer calf from this mating! The sire side needs no introduction and neither does the dam's side. She is beautiful uddered, good footed and backed by a cow family that consistently had high MPPAs. Ed Artz knew his mama cows and now we just find matches that work to inject more carcass attributes.

The dam of this guy is moving to the top of my favorite list. Good footed, beautiful uddered females back him up with cows known for longevity and sticking around because they get it done every year. Lot 328 and 307 are closely related on maternal side. If you need growth, carcass and to keep your females beautiful, this is the bull for you.

Why on earth did this bull get lotted so far down in the sale? Well because he is one of the few sleep-all-night, calving ease heifer bulls we are offering. His full brother was the high seller last year going to Kaup Red Angus. I am not sure we need to say more than that. He is flat good!

Again, I am not sure how this guy got down in the sale order other than he is safe to use on heifers and could make some beautiful females as replacements. If you are looking for a genetic package to increase your carcass and keep your growth traits all while calving out heifers, this guy will do it. We will retain the right to use him for first cycle clean up on our own heifers which would mean a late May – early June delivery. Selling half possession, half interest.

A bull that has a dam with a picture-perfect udder, a granddam with a beautiful udder and stayed in our herd until she was in her early teens. I would take a thousand females like this dam.

A little new and a little old pedigree combined into a package that can be used on larger framed heifers. You sure won't hurt your chances of hanging a choice or higher carcass on the rail with this guy.

As I have said before, these mating have been carefully laid out over the years with strategy. Here is a calf that has some of the best growth leaders behind him but also is backed by some of the best calving ease genetics too. If you need a heifer bull that can put on pounds and carcass don't miss him.

The youngest calf in the sale. He is a quarter maternal sib to 322 and 323. It's no wonder he got into the sale when he is backed by that powerful CopperQueen cow family on the dam side and backed by Jacob's pick of the Jacobson dispersal sale. If you know this kid, you know he knows how to read cattle. This paternal cow family either sells a high selling bull, one that's retained for in herd use or he hoards the heifer calves for his own herd. Take the rare opportunity to get into some of Jacob's best genetics

SUPER DISPOSITON! We are only selling half interest and half possession on this calf. We want to use him for a couple cycles on our own cows. This calf is the result of a bred heifer we purchased out of the NILE sale from Klompier Red Angus. We feel this guy checks the boxes for us and want to use him in our herd too. We will definitely work with the new buyer to get him to you when you need him, but we want him until at least July. Oh, did I mention he is halter broke and has been shown this past fall.
