

ESCO AUTOMATIC AIR EXHAUST VALVE FOR SEWAGE ESCO LINE

Automatic air exhaust valve, suitable for installation in a raw sewage lift, with interconnection of return to the suction pit, closing through diaphragm and opening by spring, with device for adjusting the spring tension and threaded connections.

ESCO has always been concerned with finding solutions for the needs of its customers, in addition to the manufacture of ESCO self-priming pumps, worldwide accepted, dedicated itself to providing sewage pumping facilities with the best possible technology, presenting the valve assemblies for these applications, Until then nonexistent in the market, reinforcing its leadership and pioneering spirit.

The automatic air escape valve is used in a grated raw sewage discharge network, installed at the outlet of the pump set in order to eliminate all air from the pump and piping.

Description	Construction (Standard)
Valve Body	Cast Iron ASTM A48 CL30
Shaft	AISI 316
Diaphragm	Neoprene
