

10 Reasons Why You Need

Briney

Tooling Systems

1. All Briney tool holders are manufactured in the U.S.A.
2. Briney has typically the fastest delivery in the industry on custom made toolholders! Prints are generated within 48 hrs. of P.O. receipt and sent out for approval. Manufacturing time starts after final print approvals.
3. All Briney Tru Position side lock end mill adapters are eccentrically ground. With this innovated design T.I.R. is dramatically reduced.
4. Briney was the first licensed manufacturer of shrink fit tooling in the United States.
5. We were one of the first companies to manufacture HSK holders domestically.
6. Tool steel holders (all HSK & Shrink-Fit) are vacuum hardened using our proprietary Nu Heat method which imparts greater molecular stability and material memory giving our tooling extremely long life.
7. Briney tapers are oscillate-traverse ground and held to the AT3 taper specification (in fact most tools check within the AT2 specification because of this grind method).
8. Briney internal and pilot diameters are traverse ground on CNC I.D. grinders under simulated operating conditions for superior size repeatability and concentricity.
9. We are a financially stable company as a member of the Gemini Group. The Gemini Group consists of four metal divisions and five plastic divisions, as well as many other interests.
10. Briney personnel are very accessible, call the factory at 800-752-8035 or Fax: 989-269-9559 Monday - Friday 7:00 a.m. - 5:00 p.m. Eastern Standard Time or E-mail us at briney@geminigroup.net.
