PLM Out Of The Box Vs Took Kit

1. PLM solutions come in two basic types
    a. Out of the Box (OOTB)
    b. Tool Kit with Heavy Configuration
2. OOTB is what most mid-market companies need
    a. Has the most of the functions needed to manage the Engineering Dept
3. Tool Kits have a limited number of features and need heavy services
    a. Configuration Services can cost as much as the software
4. What do you want to pay for?
5. Yearly maintenance...Is it worth it?
6. PLM <u>Does Not</u> have to be expensive to be effective.
