

# Platform Frame Construction Arch 231 Final Project

Calvin Glomb

# Contents

Day one - some of the tools used on the project	3
Day Two - Build the Floor Joist system	4
Day three - the floor with a cutaway to see the floor joist underneath	5
Day Four - Build the rear wall with a brace	6
Day five and six - build the walls and door with headers to support the roof truss system	8
Day seven - Wall with a header. The bottom header is not required but looks good	10
Day eight - assemble the walls	11
Day nine - building the trusses and assemble the roof	13
Day ten - The final model for your pleasure	17

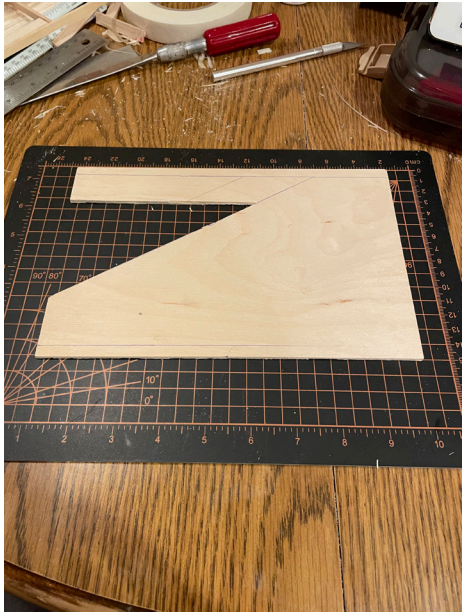

Day one - some of the tools used on the project

## Day Two - Build the Floor Joist system

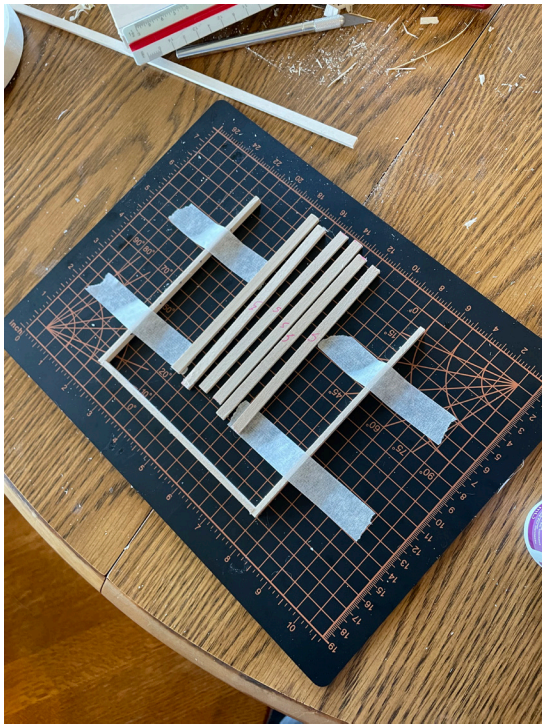

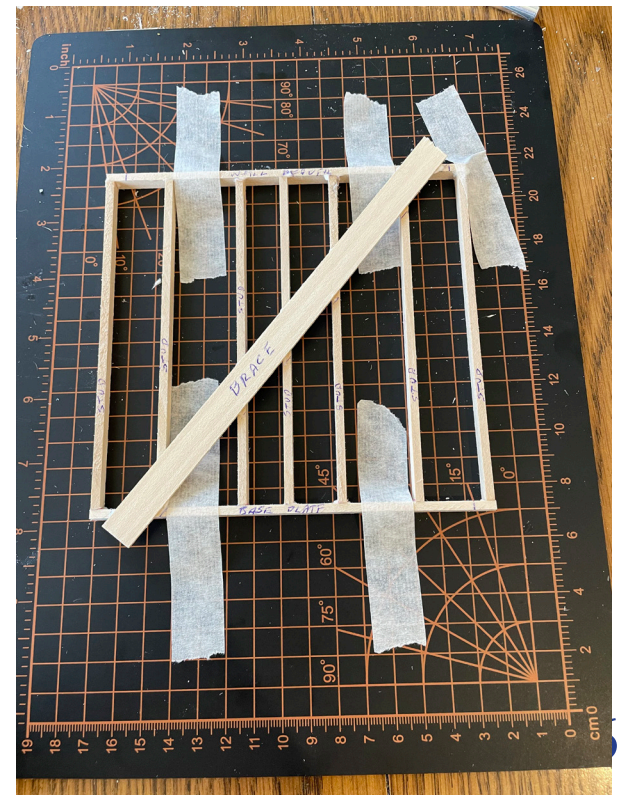

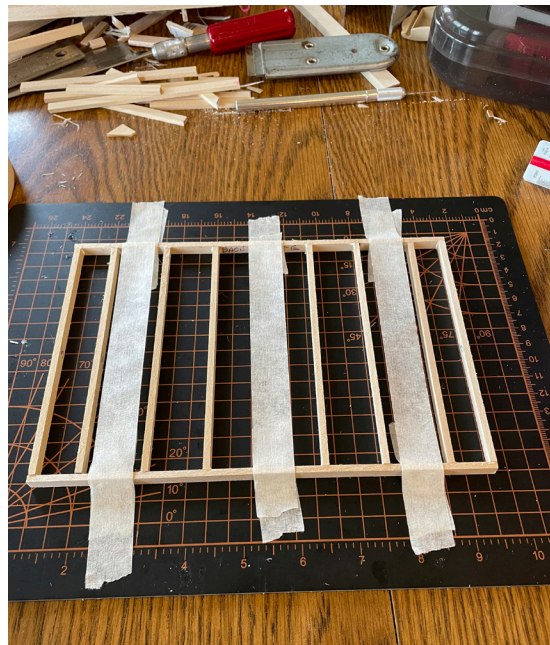

Day three - the floor with a  
cutaway to see the floor joist  
underneath

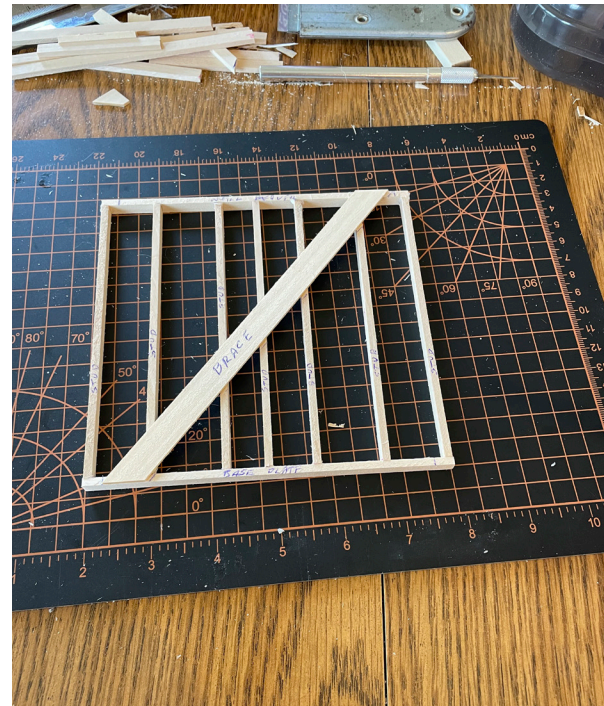

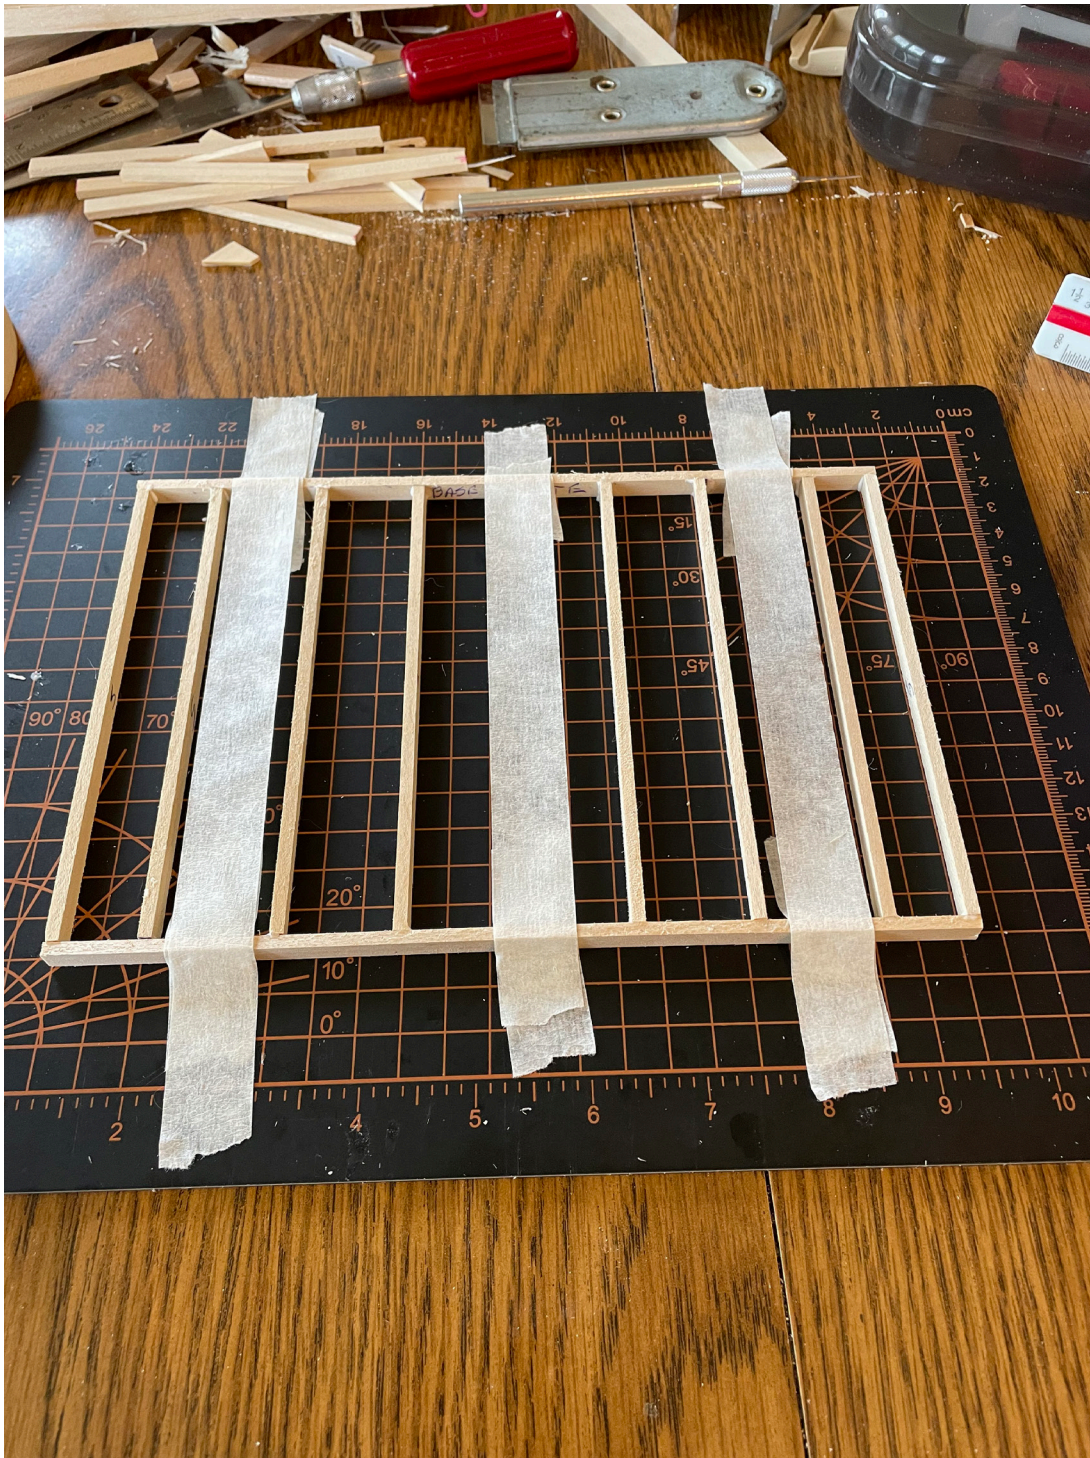

Day Four - Build the rear wall with a brace

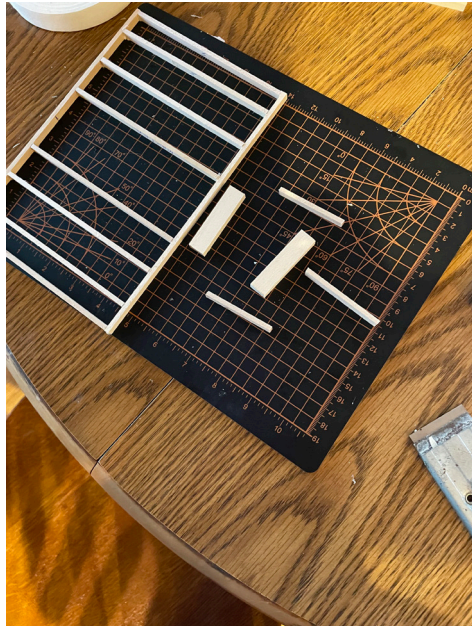

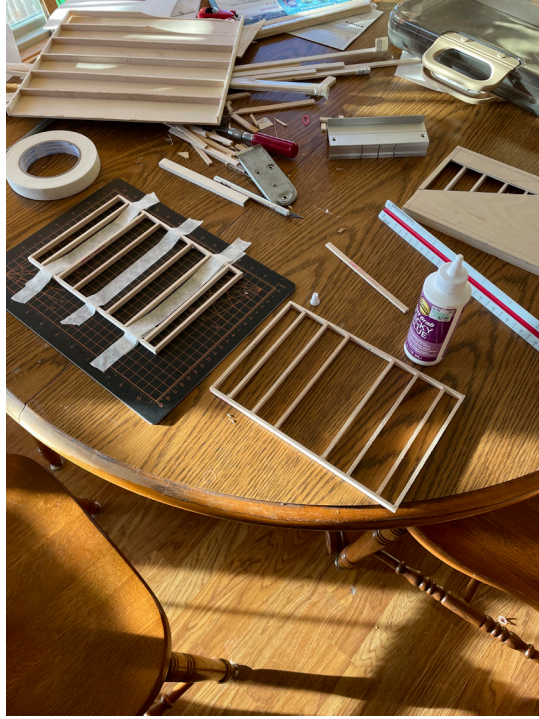

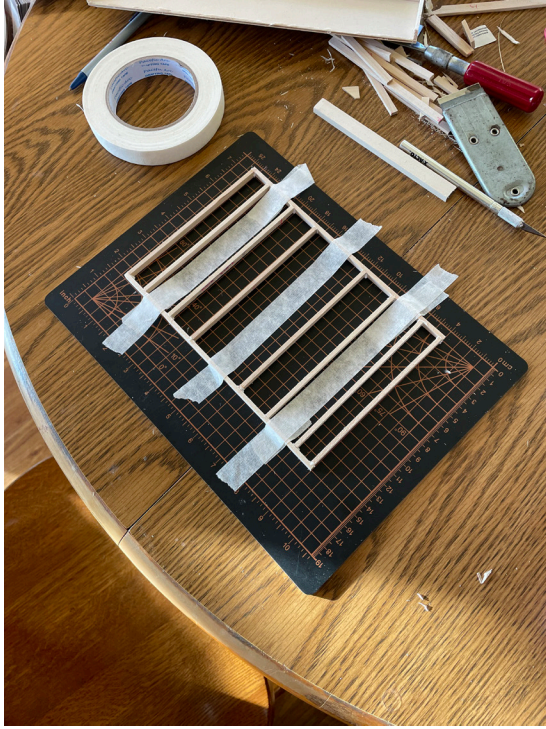

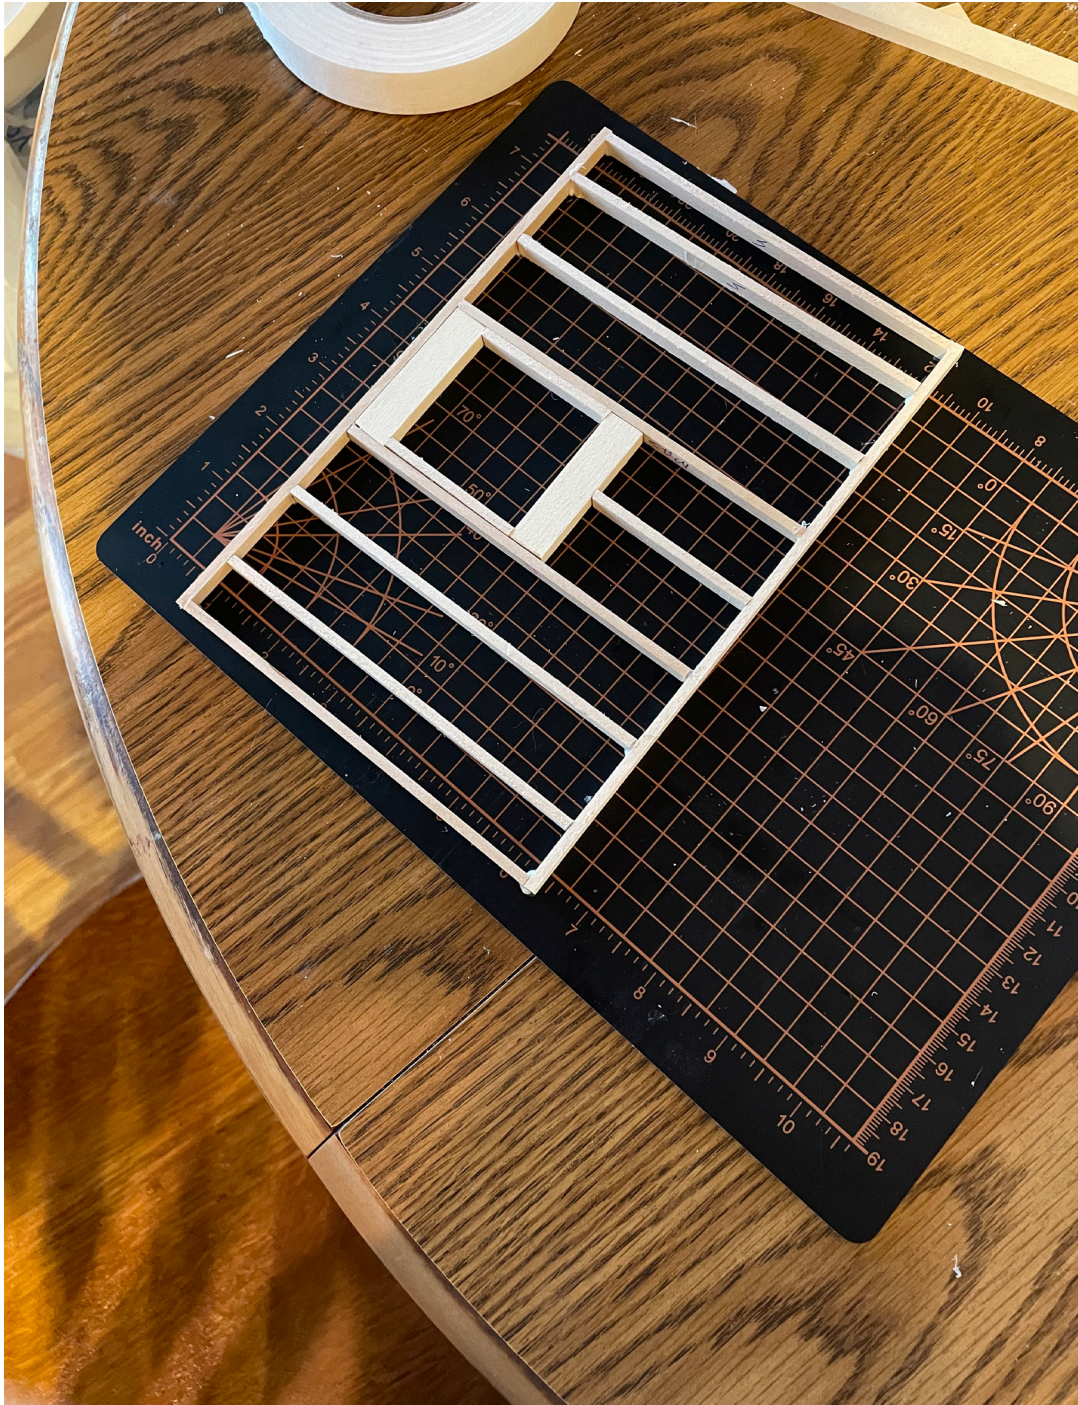

Day five and six - build  
the walls and door with  
headers to support the  
roof truss system

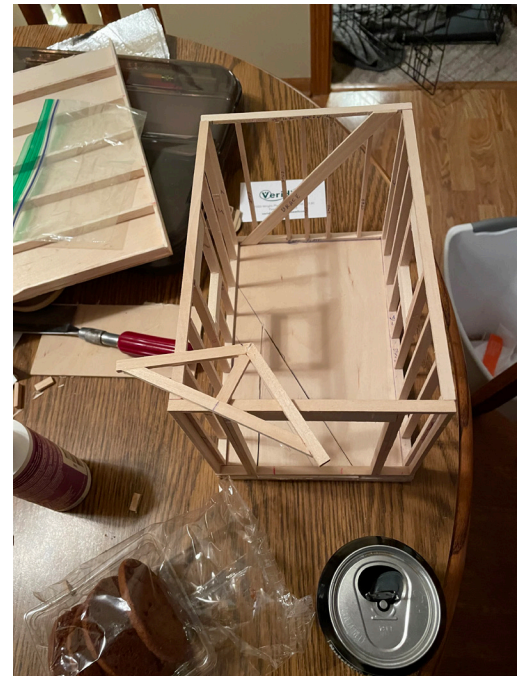

Day seven - Wall with  
a header. The bottom  
header is not required  
but looks good

Day eight - assemble the walls

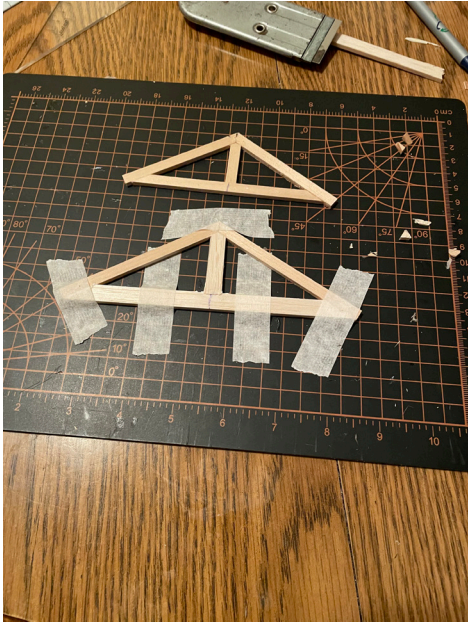

Day nine - building the  
trusses and assemble  
the roof

Day ten - The  
final model for  
your pleasure
