Do you know where your Clinical Engineering department stands on regulatory readiness?

Does your leadership have insight to the Clinical Engineering industry as a whole?

How do you currently measure the effectiveness and capacity for improvement of your Clinical Engineering staff?

Do you know what medical equipment has passed its useful life and which devices would be more cost effective if replaced (conversely, which OEM “out-of-service” devices are still serviceable)?

Do you know what information is needed for replacements, capital requests and budgeting?

Is inventory and maintenance data correct and readily available for hospital administrators?

How is maintenance data broken down in terms of usable information and reports?

Transparent Cost Reporting: A Clear Advantage of CEMC

How much are you really spending on repairs? Most multivendor service companies won't share actual maintenance costs, but we will. Learn more about CEMC's transparent, flexible and single-source clinical asset management and maintenance services at www.cemconline.com.
