Ex 9(B), Q2

- Question
- ABCD is a square and APB is an equilateral triangle.
- Prove
- (i) $\Delta APD \cong \Delta BPC$
- (ii) Find the angles of ΔDPC

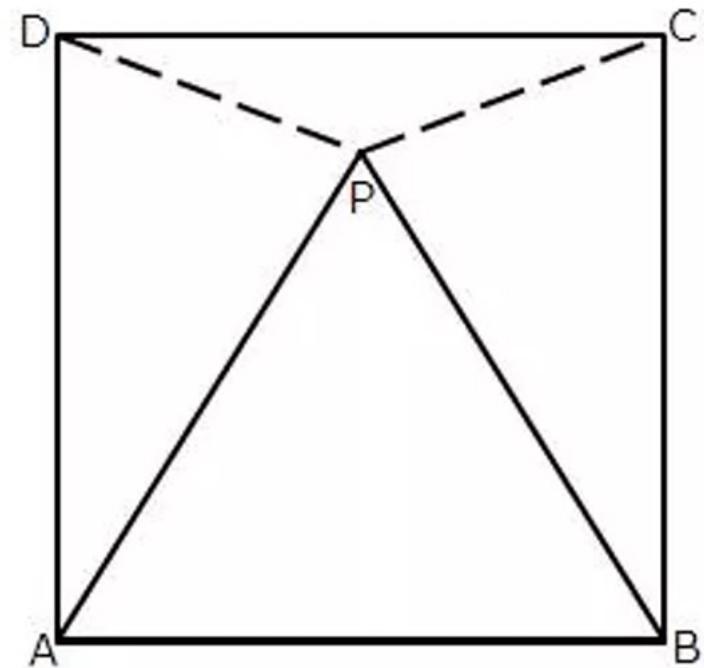

Solution Q2(i)

- Given $\triangle APB$ is an equilateral triangle.
- $\therefore AP=PB=BA$ &
- $\angle PAB = \angle ABP = \angle BPA = 60^\circ$ ----- (1)
- Since ABCD is a square
- $\therefore \angle A = \angle B = \angle C = \angle D = 90^\circ$ ----- (2)
- $\angle DAP = \angle A - \angle PAB$
- $\Rightarrow \angle DAP = 90 - 60$ (from (1) & (2))
- $\Rightarrow \angle DAP = 30^\circ$ ----- (3)
- Similarly
- $\angle CBP = \angle B - \angle PBA$
- $\Rightarrow \angle CBP = 90 - 60$
- $\Rightarrow \angle CBP = 30^\circ$ ----- (4)
- $\therefore \angle DAP = \angle CBP$ (from (3) & (4)) ----- (5)

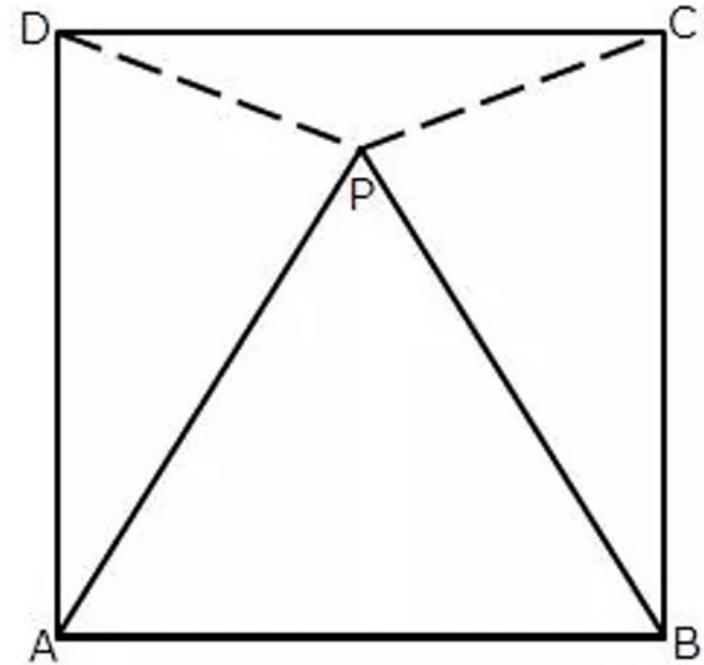

Solution Q2(i)

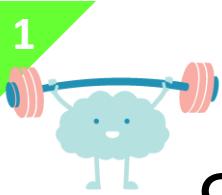

- In ΔAPD & ΔBPC
- $DA = CB$ (sides of square $ABCD$)
- $PA = PB$ (sides of equilateral ΔAPB)
- $\therefore \angle DAP = \angle CBP$ (from (5))
- $\therefore \Delta APD \cong \Delta BPC$ (SAS) Proved **Ans**

Solution Q2(ii)

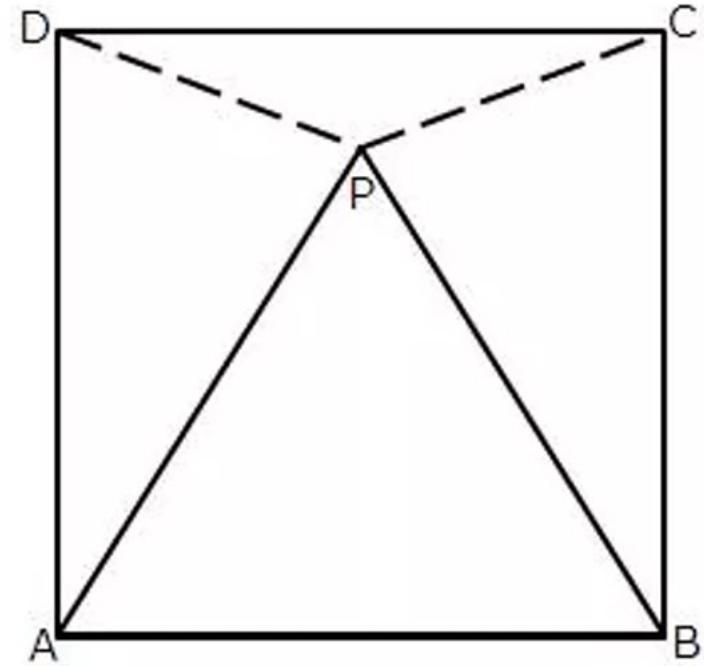

- Given ΔAPB is an equilateral triangle.
 - $\therefore AP = PB = AB \dots\dots\dots (6)$
 - Also given $ABCD$ is a square
 - $\therefore AB = BC = CD = DA \dots\dots\dots (7)$
 - $AP = DA$ (from (6) & (7)) $\dots\dots\dots (8)$
 - & $PB = BC \dots\dots\dots (9)$
 - In ΔAPD
 - $AP = DA$ (from (8))
 - $\therefore \angle ADP = \angle APD$ (angles opposite to equal sides are equal)
 - $\angle ADP + \angle APD + \angle PAD = 180^\circ$ (sum of angles of a triangle = 180°)
 - $2\angle ADP + \angle PAD = 180^\circ$ (from (9))
 - $2\angle ADP + 30^\circ = 180^\circ$ (from (3))
 - $2\angle ADP = 180^\circ - 30^\circ$
 - $2\angle ADP = 150^\circ$
 - $\angle ADP = \frac{150}{2} = 75^\circ \dots\dots\dots (10)$

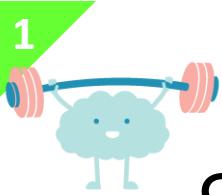

Solution Q2(ii)

- We know $\angle D = 90^\circ$ (angle of a square)
- $\angle D = \angle ADP + \angle PDC$
- $90^\circ = 75^\circ + \angle PDC$ (from (10))
- $\angle PDC = 90^\circ - 75^\circ = 15^\circ$ ----- (11)
- From (i) ,we know
- $\Delta APD \cong \Delta BPC$
- $\Rightarrow PD = PC$ (CPCTC)
- (angles opposite to equal sides are equal) ----- (12)
- $\therefore \angle PDC = \angle PCD = 15^\circ$ (from (11) & (12))

Solution Q2(ii)

- In $\triangle PDC$
- $\angle PDC + \angle PCD + \angle DPC = 180^\circ$
- $15 + 15 + \angle DPC = 180^\circ$
- $\angle DPC = 180^\circ - 30^\circ$
- $\angle DPC = 150^\circ$
- \therefore Angles of $\triangle PDC$ are 15° , 15° , & 150° **Ans.**
