

Product Model.: SA 300

SA 300 is a kind of soft self-crosslinking [acrylic emulsion](#), the coating has excellent waterproof and alkali resistance, good compatibility with cement and powder, does not release ammonia taste when miscible, and has good elastic elongation and toughness.

SA 300 is suitable for two-component waterproof coating, and old ceramic tile with strong adhesion, and do not destroy the wall, at the same time can be used to prepare high-performance water-based elastic putty roofing waterproof coating and elastic intermediate coating.

Product Properties

Chemical Type	Styrene Acrylic Copolymer
Appearance	Milky White Liquid
pH (25°C)	6.0-9.0
Brookfield Viscosity (cps, 25°C, 3#12r)	200~2000
Solid Content (%)	56 ±1
MFFT (°C)	< 1
Particle Size (μm)	0.2~0.4

Storage

The product should be stored in airtight container and avoid cold or high temperature.

Suggestive normal storage temperature is 10-35°C. Period of validity is six months after the packing date.
