

September 2018

We had our H2O water recycling system installed February 2018. With escalating water expenses and demand it was imperative we found a way to conserve water. The first water recycling system we installed was much more expensive and unfortunately not as effective so we were looking for an alternative solution.

The H2O system is highly effective. We are no longer storing water overnight and therefore the water stays fresher while requiring little to no maintenance. We are recycling approximately 2500 gallons per day which makes up half of our daily usage. This has made a significant impact on our water expense and gives us the ability to market ourselves as a more environmentally conscience company which is a wonderful marketing tool.

I would highly recommend this product. It is very easy to use and even easier to maintain. The support from H2O has been excellent. They have helped with any questions or issues that may arise and work closely with our soap vendor to ensure the integrity of our finished product. We are very happy with our decision to purchase an H2O system.

Sincerely,
