FEBRUARY 18, 2025

The background is a composite image. The left side shows the interior of the Bundestag chamber, with rows of blue seats and a large eagle sculpture in the background. The right side shows the exterior of the Reichstag building, featuring its iconic glass dome and classical facade. A diagonal line separates the two images.

GERMAN FEDERAL ELECTION 2025 FORECAST

Electoral context

- ✓ The result of our model anticipates that only five parties will enter the Bundestag. FDP and BSW will not make it into the chamber. There is a high chance that Sonestige will also gain a seat.
- ✓ Our model predicts an election that will reflect a polarized Germany. The AFD will make a breakthrough and gain a historic number of seats in the Bundestag. It will become the second electoral force. There seems to be a direct transfer of traditional SPD and FDP voters to the blue party.
- ✓ AFD is not only consolidating its broad-based strength in Brandenburg, Mecklenburg-Vorpommern, Saxony, Saxony-Anhalt and Thuringia, but is also making progress in the rest of the country by increasing its share of the vote.
- ✓ It is expected to be an election with a higher turnout than the last two elections.

The figures presented and their frequencies are estimates of the statistical model and have an associated margin of reliability as they are stochastic variables; they serve to build our scenarios and in no case represent official data.

METHODOLOGY

These estimates are constructed based on our hybrid model of fundamental variables and public opinion. AI algorithms are used to generate point estimates for estimation.

This model generates estimates in each of the constituency races and is not the product of direct or weighted frequencies on voting intentions.

The margin of error of the estimates at 95% confidence is at least $\pm 3.5\%$ average of the point figures presented.
