Electoral context

- ✓ The 2024 United Kingdom general election is scheduled for Thursday, 4 July 2024
- ✓ It will determine the composition of the 650 seats in the House of Commons. Once elected, the new majority establishes the Government of the United Kingdom.
- ✓ It will be the first UK general election in which voter identification is required to vote in person in Great Britain
- ✓ The Conservative party has been in power for the past 14 years. (since the 2010 election)
- ✓ Our model predicts that the Conservative Party may suffer a big loss and gain an all-time low number of seats (130), the worst result since the Great Reform Act of 1832.

ESTIMATED TURNOUT Most likely scenario

| Region | Est. Turnout |
|--------------------------|--------------|
| East Midlands | 70.44% |
| East of England | 70.82% |
| London | 69.54% |
| Northeast | 66.39% |
| Northwest | 69.04% |
| Northern Ireland | 62.91% |
| Scotland | 70.82% |
| Southeast | 72.97% |
| Southwest | 74.69% |
| Wales | 68.90% |
| West Midlands | 67.69% |
| Yorkshire and The Humber | 66.71% |
| United Kingdom | 69.97% |

The figures presented and their frequencies are estimates of the statistical model and have an associated margin of reliability as they are stochastic variables; they serve to build our scenarios and in no case represent official data.

METHODOLOGY

These estimates are constructed based on our hybrid model of fundamental variables and public opinion. Al algorithms are used to generate point estimates for estimation.

This model generates estimates in each of the 650 constituencies races and is not the product of direct or weighted frequencies on voting intentions.

The margin of error of the estimates at 95% confidence is at least +- 3.5% average of the point figures presented.
