USA GENERAL ELECTION 2024
FORECAST

NOVEMBER 2, 2024

Electoral context

- ✓ With two days to go until the U.S. election our model suggests that Trump has advanced even more, and the margins have narrowed even further in Trump's favor.

- ✓ As their probability of winning has increased even more since the previous forecast, essentially the choice is up in the air.

- ✓ Participation and electoral mobilization will undoubtedly play a fundamental role in the outcome.

- ✓ Trump's chances of winning have greatly increased in Arizona, Nevada, Georgia and North Carolina, which has meant that he only needs to win one of the three states to win the race, while Harris needs all three of the so-called blue wall states.
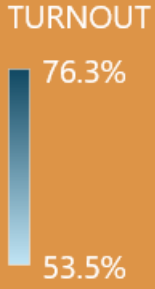

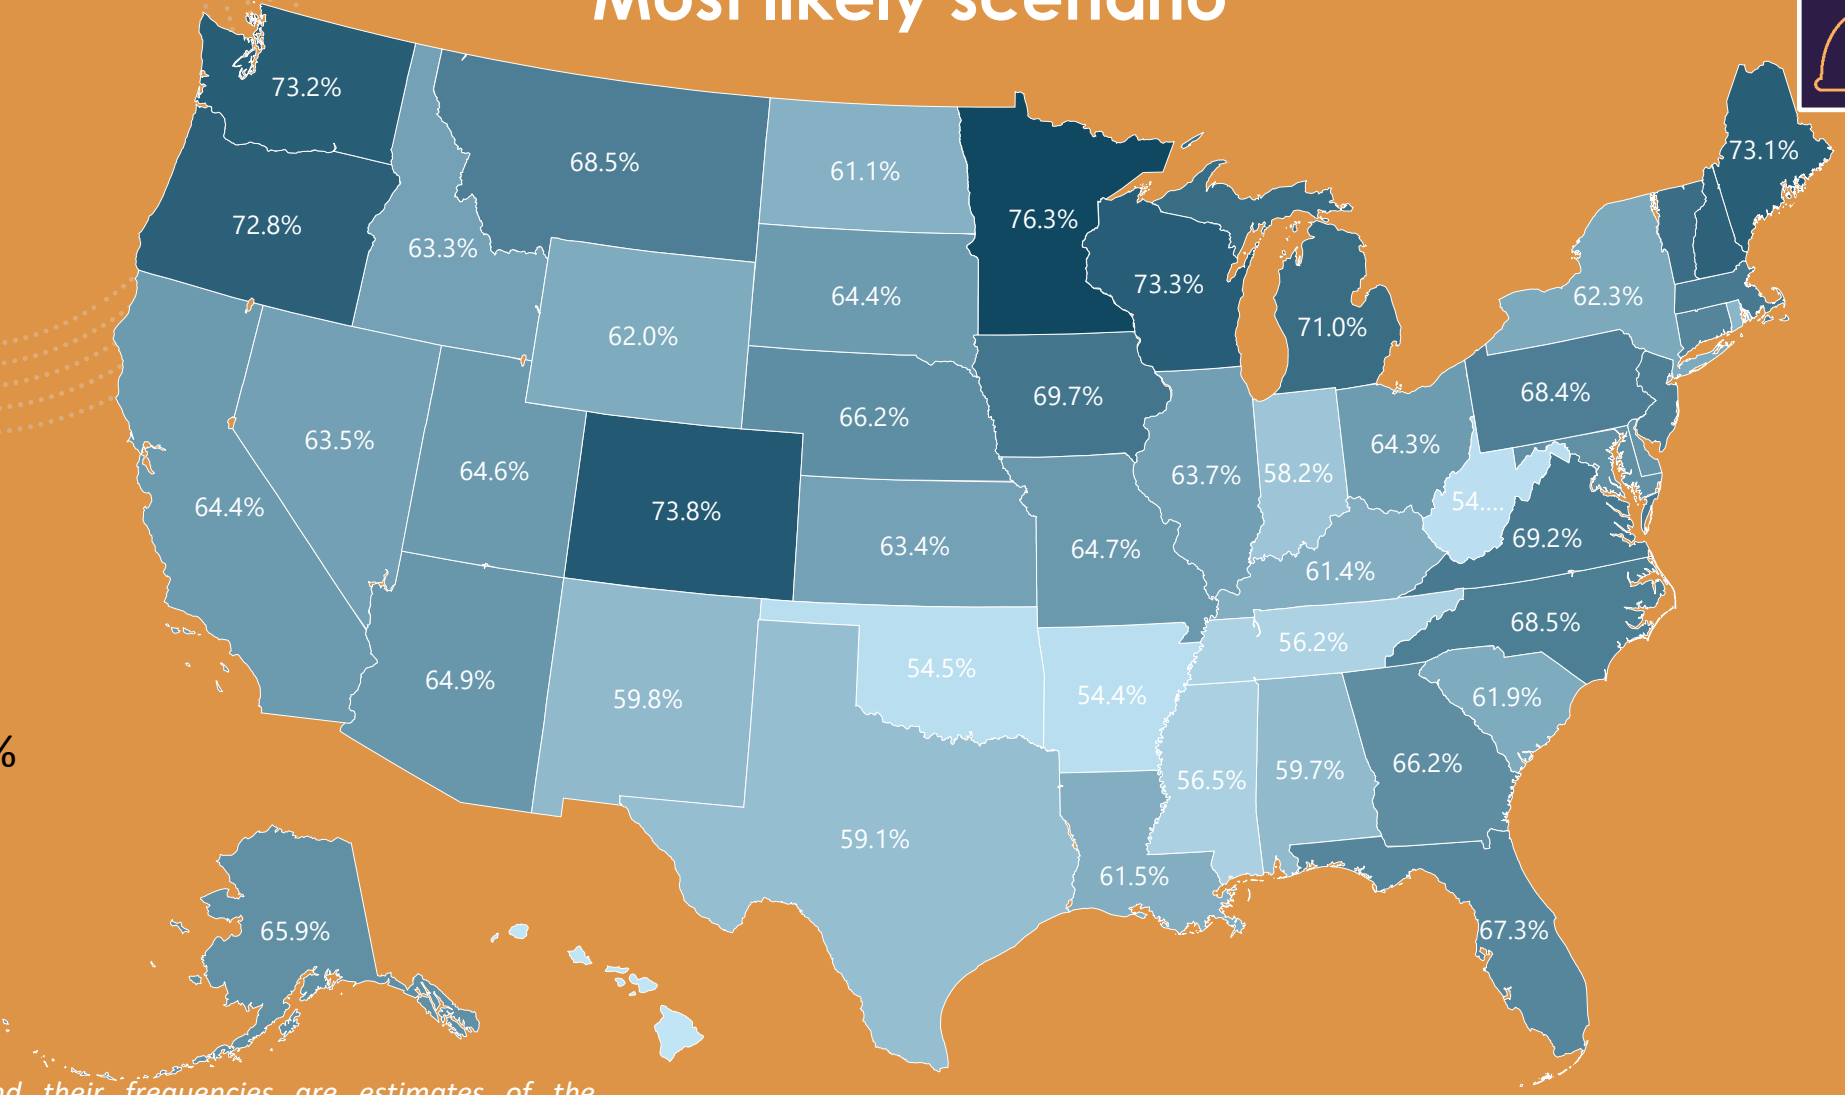

- ✓ Our main scenarios changed.

**02. Scenarios in competitive states.**

METHODOLOGY

These estimates are constructed from our hybrid model of fundamentals and public opinion. This model has been successfully applied in other countries and uses AI algorithms to generate point estimates and ranges.

This model generates estimates in each of the 50 states and federal districts and is not the product of direct or weighted frequencies of voting intention.

The margin of error of the estimates at 95% confidence is at least +- 3.0% on average of the point estimates presented.

Our model detected states with a large or more secure advantage for each candidate, states with a slight advantage and competitive states.

Based on this, in the following section we generate 128 scenarios with their associated results and probabilities on the possible outcome of the previously identified battleground states (Arizona, North Carolina, Georgia, Nevada, Pennsylvania, Michigan and Wisconsin).
