LASER STRIKE V3

The new Laser Strike V3 target system has been designed to continue our innovation in laser training targets. Unlike our previous targets, it is battery powered and includes light and sound. In **Target Mode** it will respond with light and sound (optional) when hit with a laser. In **Training Mode**, it will wait a random amount of time and then prompt you with light and sound (optional) at which time you acquire and shoot the target within the two second timer. The target can easily be placed into any of the available modes using your laser. The mode setting sequence is as follows:

When the target is turned on, it will flash once. After three seconds, the target will beep twice and allow you about three seconds to set the operating mode using your laser:

**** THE TARGET MUST FLASH TO INDICATE THAT A HIT HAS BEEN REGISTERED ****

1. No shot during operation mode selection time
 - Target Mode with light and sound
2. One shot during operation mode selection time
 - Target Mode with light and NO sound
3. Two shots during operation mode selection time
 - Training Mode with light and sound (two second shot timer)
4. Three shots during operation mode selection time
 - Training Mode with light and NO sound (two second shot timer)

At the end of the operation mode setting time, the target will flash and beep once indicating that it is ready for use. If you selected Training Mode, the target will flash quickly 3 times. Shoot the target 1, 2, 3, or 4 times to set the training mode response timer. Default is 2 seconds.

The target will beep if there is no activity for about four minutes. Visit the website for more information.

**** POWER SWITCH: ON = TOWARDS FRONT OF TARGET ****
