

MAST BRACKET INSTALLATION GUIDE

SAILTECK®
Sail to win

STRAP FIXING

Use the straps provided. To avoid sliding and rotation of your compass, bolt the straps to the mast bracket with the nuts and bolts provided.

Fit the self-adhesive patches to the mast so that the straps don't slide or rotate on the mast. Position the straps carefully onto the patches to ensure good alignment of the compass, then pull tight. For additional security add an elastic bungee and thread through the four holes.

SLUG FIXING

Fit the center bolt supplied and drop the slug into the mast track. Tighten the center bolt, but do not over-tighten. Use the bolts provided to fix the mast bracket to the slug. For additional security add an elastic bungee and thread through the four holes.
