August 19, 2019

Dear Colleagues,

I am pleased to present to you the *Massachusetts Curriculum Framework for Arts* adopted by the Board of Elementary and Secondary Education in June 2019. This Framework is built upon the foundation of the 1999 *Massachusetts Curriculum Framework for Arts*, as well as the *National Core Arts Standards* developed in 2014.

The current Framework incorporates improvements suggested by members of the Arts Curriculum Framework Review Panel, scholars who served as Content Advisors, and the individuals and organizations who provided comments during the public comment period in early 2019.

This revision of the Framework retains the strengths of the previous frameworks and includes these improved features:

- addition of the discipline of media arts to the existing disciplines of dance, music, theatre, and visual arts;
- increased emphasis on the importance of creating original work in the performing arts and on presenting in visual and media arts;
- increased emphasis on responding to the work of other students and work from masters, with a focus on understanding the context in which art works were created;
- alignment to a consistent structure organized around a common set of artistic practices across the five disciplines to encourage integrated instruction and collaboration; and
- ambitious standards that highlight the importance of the arts as part of a well-rounded education that prepares students for college, careers, and civic participation.

In the course of revising these standards, the Department received many valuable comments and suggestions. I want to thank those who contributed their ideas, enthusiasm, and determination to make the standards useful for students, families, educators, and the community. In particular, I am grateful to the members of the Arts Standards Review Panel, especially the facilitators who led those panels, and to our Content Advisors, for giving their time generously to the project of improving learning standards for Massachusetts students. I am proud of the work that has been accomplished.

We will continue to collaborate with schools and districts to implement the 2019 *Massachusetts Curriculum Framework for Arts* over the next several years. We have hired a new full time Arts Content Support Lead to assist with implementation. All Massachusetts frameworks are subject to periodic review and improvement for the benefit of the students of the Commonwealth.

We hope you will find this Framework useful in building a strong arts curriculum for your school or district. A well-rounded arts curriculum should expose students to a rich diversity of high-quality works from multiple genres, cultures, and time-periods. The purpose of teaching the arts is not only to develop skills in a given art form, but also to instill in students a deep appreciation for art, beauty, and truth, while broadening their understanding of differing perspectives on the human condition.

Thank you again for your ongoing support and for your commitment to improving achievement for all students.

Sincerely,

Jeffrey C. Riley
Commissioner of Elementary and Secondary Education

The Vision describes the significance of the arts to a well-rounded education and to preparation for college, career, and civic participation. **The Guiding Principles** describe the key components that should guide the design, implementation, and evaluation of pre-K through grade 12 arts curriculum and instruction. **The pre-K through 12 Standards for Artistic Practice** describe skills students develop and improve across their entire Arts education. They focus on dispositions and skills that underlie creating, presenting, producing, responding within each arts discipline, and making connections across disciplines. **The Content Standards** describe what students should know and be able to do in each of the arts disciplines within elementary and middle school grade clusters (pre-K–K, grades 1–2, 3–4, 5–6, 7–8), and in high school courses at the foundations, proficient, and advanced levels. They are organized into five disciplines (dance, media arts, music, theatre, and visual arts) and are designed to complement the development of the Standards for Artistic Practice.

Vision

All Massachusetts students will develop artistic literacy through active participation in the arts, expressing creative ideas with skill, confidence, and artistic intent. A high-quality arts education empowers students to take artistic risks and supports the social emotional and learning needs of all students. Through practices related to creating, presenting or performing, responding, and connecting, students will understand the role of the arts in their individual lives and interests. While recognizing the intrinsic value of the arts, students will also discover the meaningful connections between the arts and other disciplines, and how the arts contribute to their communities and cultures around the world. As art students respond to great artists and works of art, they develop the ability to analyze artworks in terms of their formal qualities, historic style, social context, and artistic intent. The practice of responding to works of art builds perceptive acuity and aesthetic sensitivity. A rigorous progression of learning and engagement with the arts throughout Pre-K–12 education is the foundation for a rich, lifelong relationship with the arts.

The Arts Are Important to a Well-Rounded Education

Federal education legislation of 2015 (the “Every Student Succeeds Act”) defined a well-rounded education as one that includes the arts. The arts complement the skills and content of mathematics, science and technology/engineering, English language arts, history and social science, and foreign languages. Study of the arts engages students’ divergent thinking in seeking and finding solutions to problems, and in communicating ideas and emotions not amenable to expression through words alone.

A well-rounded pre-K to grade 12 education prepares all students to succeed in education beyond high school. Study of the arts develops attitudes, skills, and content knowledge applicable to a comprehensive education. These include the pursuit of excellence; creativity and flexibility; focus and concentration; working collaboratively; respect for people with diverse experiences, abilities, and perspectives; and cultural and historical knowledge.

A well-rounded pre-K to grade 12 education looks ahead to students’ employability and adaptability to careers that are likely to evolve throughout their lifetimes. The global economy is shifting to an economy of ideas and innovation. According to a coalition of researchers, 73 percent of American corporate leaders affirm that creativity is an essential skill for success, but most high school graduates were deficient.¹ Companies with greater measures of creativity perform better financially.² Currently, over 3.4 million people nationally are employed in creative industries. In Massachusetts alone, the creative economy includes jobs ranging from design to writing to entertainment and reflects a billion-dollar industry.³

A well-rounded pre-K to grade 12 education prepares students to contribute to the civic life of their communities. The arts are an indispensable element of vibrant community life in Massachusetts cities and towns. Citizens’ lives are enriched by local arts centers and internationally known museums and performance groups whose exhibitions and productions often provoke discussions about society, politics, and aesthetics. People who have had sequential and meaningful arts education as students tend to continue to participate in

the arts as adults – as performers, creators, and audience members. They support the arts in the community today and as a legacy for future generations.

The History and Review Process of the 2019 Massachusetts Arts Framework

The Massachusetts Arts Framework of 2019 is the third set of arts standards for Massachusetts since the Massachusetts Education Reform Act of 1993 authorized the Board of Education “to direct the commissioner to institute a process to develop academic standards for the core subjects of mathematics, science and technology, history and social science, English, foreign languages, and the arts.” The Board adopted the first set of arts standards in 1995. In 1999, the second Framework identified standards in dance, music, theatre, and visual arts, following the organization of the 1994 *National Standards for Arts Education*.

The latest Massachusetts review process began in October of 2017. Department of Elementary and Secondary Education (DESE) staff met with arts educators from across the state, as well as representatives from state arts education associations, to develop and answer questions to guide the review process. Following this initial outreach, DESE staff recruited arts educators to serve as facilitators to lead the review process for each arts discipline. These facilitators worked with a review panel in summer and fall of 2018 to develop proposed modifications and additions to the 1999 arts standards.

The 2019 *Massachusetts Arts Framework* endorses the NCAS definition of artistic literacy, uses the NCAS “Anchor Standards” as the Massachusetts “Standards for Artistic Practice,” and includes media arts as a distinct artistic discipline. It includes Content Standards that specify what students should know and be able to do in the arts in pre-K to K, grades 1–2, 3–4, 5–6, 7–8, and at the novice, foundation, proficient, and advanced levels of high school courses.

What the Arts Framework Does and Does Not Do

The standards define what all students should know and be able to do, not how teachers should teach. While the Framework provides an overall structure, it purposefully leaves the details of curriculum and instruction to the discretion of district teachers and curriculum developers. Educators are best equipped to design programs that are most appropriate in promoting excellence in their own communities.

Framework Structure

The Curriculum Framework provides a structure intended to guide the selection, development, and evaluation of arts curriculum and programs that builds students' artistic literacy. It primarily does this through the Standards of Artistic Practice, specifically the development of artistic ideas to:

- create original work aligned to the artist's intent,
- present or perform artistic works to others,
- respond to the structure and context of artistic works, and
- make connections about the impact of the arts on oneself, history, and culture.

It further identifies specific Content Standards, aligned to the Standards for Artistic Practice, that students should demonstrate by the end of each grade dyad or course.

District Decisions about Building Technical Skills and Vocabulary

Because local flexibility is important in arts programs, the Framework leaves to districts the articulation of which technical skills, concepts, and academic vocabulary to emphasize, and at which grade levels or courses to introduce and refine them. All teachers have an important role to play in supporting the development of students' academic vocabulary and knowledge about the world, as outlined in Language Standards 4–6 of the *English Language Arts and Literacy Framework*. Arts educators help students build general academic vocabulary when they take the time to teach students the meanings of words such as *compose/composer/composition*, or *image/imagery/imagination* in an arts context, or explain how common words with multiple meanings are used in the arts (e.g., a *high note*, a *warm color*, a block *print*, *firing* a clay pot). They contribute to students' ability to speak and write precisely by introducing them to the technical vocabulary in the arts: *jazz*, *choreography*, *overture*, *trumpet*, *abstract painting*.

While it is paramount for students to gain knowledge of the crucial vocabulary, elements, and a range of technical skills to participate in the arts, it is important to remember that technical skills and vocabulary are in service to the Standards for Artistic Practice outlined in this Framework. Students should learn to read western musical notation, for example, because this knowledge will help them select, analyze, and interpret artistic works for presentation. They should learn about elements of visual arts because these concepts can help

What is Media Arts Education?

The Framework structure has changed since the 1999 version by including Media Arts as a new arts education discipline. Media Arts education encompasses interconnectivity across all disciplines and domains, artistic and academic elements, aesthetics and forms for the purpose of learning and creating. Media artworks are intrinsically interdisciplinary, integrative, and expressive, inclusive of imaging, sound, moving images, virtual and interactive components. Media artworks may be realized through, but not limited to the following domains: digital art, photography, graphics, music, video, animation, motion graphics, web design, interactive apps and game design, 3D products, architecture and environments, audio production, Television, internet broadcasting, virtual and augmented reality, and virtual worlds.

students to perceive and analyze artistic works. It is important that arts programs make these connections explicit for students, and regularly reinforce the relationship between knowledge and practice.

Development of Foundational Skills

The Curriculum Framework provides an overall structure for developing multi-dimensional artistic practices from pre-K–12 while remaining open-ended so districts may customize vertical alignment of foundational artistic skills. Such foundational skills include singing in music or drawing in visual art, for example. The Department recognizes a need for further support in districts that may require additional resources and professional development. For an example resource, refer to *Appendix 2: Pre-K–12 Sequential Development of Singing Skills*. Additional resources for the other arts disciplines will be forthcoming from the Department within implementation guidelines.

Supporting Excellence

As with all state frameworks, the Arts Framework provides a floor, not a ceiling. Standards provide a baseline to support equity across the Commonwealth, with the understanding that many programs and individuals will exceed these expectations. Similarly, it is expected that a high-quality district arts program will support excellence by encouraging individual students to move far beyond the standards for visual, performing, and media arts.

Supporting All Students

All students must have the opportunity to learn and meet the same high standards if they are to access the knowledge and skills that will be necessary and rewarding in their post-high-school lives. No set of standards can reflect the great variety of abilities, needs, learning rates, and achievement levels in any given classroom. The standards do not define the support materials that some students may need. It is beyond the scope of the standards to define the full range of support appropriate for English learners and for students with disabilities, but the Department acknowledges the need for additional resources such as Appendix 1.

Guiding Principles for Effective Arts Education

The following principles are philosophical statements that underlie the standards and resources in this Curriculum Framework. They should guide the design and evaluation of arts programs in schools. Programs guided by these principles will prepare students for colleges, careers, and their lives as productive citizens.

Guiding Principle 1

An effective arts education enables students to become artistically literate.

Artistic literacy is the knowledge and understanding required to participate authentically in the arts. Fluency in the language(s) of the arts is the ability to create, perform or present, respond, and connect through symbolic and metaphoric forms that are unique to the arts. It is embodied in specific philosophical foundations and lifelong goals that enable an artistically literate person to transfer arts knowledge, skills, and capacities to other subjects, settings, and contexts.⁴

As a society, we need to embrace the model that continued experience leads to learning in arts, just as it does in other valued subjects, like mathematics, science, history, and language study. Arts are our human birthright—every culture throughout time and across the globe has them. They are another way of knowing, and at least as valuable as any other subject in understanding the world. As opposed to being the purview of the talented few, the arts are essential throughout everyone’s lives for understanding and appreciation, expression, social and emotional well-being, and creative opportunity.

To give every individual the opportunity to live a life enriched by artistic engagement fueled by competence and confidence, this *2019 Massachusetts Arts Curriculum Framework* identifies explicitly how artistic literacy is acquired and developed in Dance, Media Arts, Music, Theatre, and Visual Arts.

Guiding Principle 2

An effective arts education develops students’ understanding of the concept of artistic intent.

Arts programs should focus on helping students create or perform work guided by thoughtful and intentional decision-making. Likewise, students should understand that an analysis or critique of a work of art considers artistic intent. A high-quality arts education program keeps artistic intent central by ensuring student analytical and aesthetic thinking, opportunities to share work, and conversations.

Artistic intent is the meaning the artist intended in a work, so far as it can be determined from the artist’s statements or cultural context.

What does a classroom look like when a teacher focuses on developing artistic intent? Imagine a kindergarten teacher who inspires students to have an aesthetic response to a snowy day. The children go outside, observe the rhythms of falling snow, examine the geometry of snowflakes, hear the snow crunch beneath their boots, feel the chill and wetness of melting snow through their mittens. Back inside, children talk about the different

⁴ National Core Arts Standards: A Conceptual Framework <https://www.nationalartsstandards.org/content/national-core-arts-standards>

ways they perceived snow before choosing art materials to express their *own* ideas of experiencing snow. The images are all likely to be different, each informed by an individual child’s desire to communicate what he or she saw, heard, or felt. The classroom gallery becomes a vibrant space as children discuss the intention behind their work (e.g., “I wanted to show how snow swirls” “I wanted to show how I shiver when it’s cold”).

The young child who learns that making art is purposeful creative work has taken the first step to becoming an artist and comprehending the power of the arts to inspire creative expression. As President John F. Kennedy wrote, “If art is to nourish the roots of our culture, society must set the artist free to follow his vision wherever it takes him. We must never forget that art is not a form of propaganda; it is a form of truth...”

Guiding Principle 3

An effective arts education fosters a coherent and rigorous progression of learning.

Each lesson of an arts program should build upon previous lessons to create a coherent progression of learning. This framework presents the artistic processes of creating, presenting/performing, responding, and connecting from the *National Core Arts Standards* in 11 Standards of Artistic Practice that are applicable to all the grades. It also includes Content Standards that specify what students should know and be able to do in the arts disciplines at various points in their school experience. The Content Standards and Practice Standards are designed to be used together to connect knowledge, skills, and practices that build into a coherent, sequential, and rigorous program. Using the structure of Content and Practice Standards, educators express their own creativity in choosing resources and materials to implement aligned lessons, units, and assessments in creating a coherent program that builds on the learning from previous lessons and units to promote the development of students’ artistic literacy.

Guiding Principle 4

An effective arts education is relevant to students’ interests.

We live in a world full of music, images, words, and movement. Most students already have deep and personal relationships with the arts—they are apt to have passionate opinions about favorite musicians or actors. A high-quality arts program supports educators in becoming familiar with the popular art forms students already value and makes authentic efforts to include these genres and styles where appropriate, not just as a strategy for engagement, but as legitimate forms of contemporary expression. Teaching with students’ interests in mind might mean assignments in which students design their own superhero figures, compose a musical hook, research the interaction of social movements and visual memes, or perform spoken word poems with a distinctive contemporary beat.

This guiding principle is challenging. What engages students one year may not interest students the following year. Educators need not become experts in every emerging art form, but they should become skilled at helping students understand how to express themselves in ways that are most authentic to them.

Guiding Principle 5

An effective arts education provides students with broad and frequent access to great works of art from the past and present, across genres, time periods, and styles, and represents diverse cultures in the United States and from around the world in order to develop an appreciation for the richness of artistic expression, understand the connections between art and history, and cultivate one’s own sense of beauty.

Encouraging students’ artistic interests and their need for self-expression should be complemented by an introduction to enduring art from a wide variety of perspectives and cultures throughout history. Although “beauty is in the eye of the beholder,” great works of art not only reflect technical mastery, they also make visceral connections with their audience. Great art can inspire or provoke; it can reveal hidden truths or awaken the imagination; it can engender joy or sadness; it can produce serenity or awe. Regardless of their subject or form, accomplished works of art can communicate intellectually and emotionally in ways that are powerful and moving, and uniquely human.

In order to recognize the beauty and impact of art, students at all grade levels must have regular opportunities to experience important works of art, appropriate to their age. In doing so, they will also learn about the artistic techniques and aesthetic sensibilities that can help them to develop their own distinctive perspective and voice.

The arts from all over the world are an important part of our complex heritage. Integration of the arts and the history and social science curricula can help students understand the scope and breadth of human history, while at the same time providing a basis for understanding the context and themes of artworks that have become historical and cultural touchstones. For example, in the Grade 1 standards of the *History and Social Science Framework*, students look at the meaning of symbols in the lyrics of American songs such as “America the Beautiful.” This is an opportunity for collaboration between the music and history/social science educators. In the course of a well-designed pre-K to grade 12 arts program, arts curriculum designers have tremendous opportunities to motivate students to explore and perform works from Africa, Asia, and the Middle East, as well as Europe and the Americas.

The twenty-first-century classroom and workplace includes people from diverse cultures and experiences and perspectives who must learn and work together. To be college and career ready, students need to understand and appreciate other perspectives and cultures. One way in which students learn about views different from their own is through the examination and performance of artistic works from varying cultures, historical periods, and genres. Deep study of works of art from around the world helps students become aware of how their own culture shapes attitudes and aesthetic values.

Studying a wide range of art forms helps students understand cultural allusions that they will encounter elsewhere in conversation and study. For example, the student who has discussed Salvador Dali’s 1931 painting, “The Persistence of Memory,” will recognize its melting clocks and bleak landscape as examples of surrealist imagery. Students who have performed and learned about a variety of musical styles will hear how composer/lyricist Lin-Manuel Miranda has incorporated musical elements from hip-hop, rhythm and blues, pop, soul, and show tunes into the musical *Hamilton*.

Guiding Principle 6

In effective arts education programs, students have the opportunity to experience different artistic roles, groupings, and uses of media.

In addition to exposure to a variety of genres and styles, students should learn about many different kinds of work artists do and the different media they use. This will mean different things for different disciplines. Students should have experiences in different roles such as that of a dancer or choreographer in dance, or a stage manager or costume designer in theatre. Students should explore different instruments in music, produce a range of interactive or design projects, or use an array of visual arts media in both two- and three-dimensional work. This guiding principle is particularly important in the elementary and middle grades. By high school, especially in advanced courses, it is appropriate for students to focus on deep mastery of a particular role or medium, whether it is playing the flute, lighting a theatrical production, sculpting in wood, painting, or animating a short film.

Across the arts program students should have a wide range of experiences working independently and with different size groups. For example, in visual art classes where students usually work independently, educators can design small and large collaborative group projects that reflect how contemporary professional artists complete major works and installations. In music and dance programs where students usually perform as large group ensembles, educators explore opportunities for small group and solo performance opportunities.

Guiding Principle 7

An effective arts education makes connections with other disciplines and bodies of knowledge.

An effective arts curriculum provides opportunities for students to make connections among the arts, with other academic subjects, and with arts resources in the community. Arts Integration is a method of teaching and learning that links curricular content with artistic discipline, creative expression, and individual inquiry. Consulting the grade-level and course topics and standards in the *Massachusetts Science and Technology/Engineering, Mathematics, English Language Arts and Literacy, History and Social Science, Digital Literacy and Computer Science, Foreign Languages and Comprehensive Health Frameworks* helps arts teachers find opportunities for collaborating with teachers of these subjects. Creative exploration helps students find personal connections to content knowledge, enhances comprehension, and develops students' point of view, making academic content compelling and memorable.⁵

Connecting the arts to other disciplines sets the expectation that students will learn about their artistic heritage. They will investigate the historical and cultural contexts of the arts, learn about the arts in their communities, and use their knowledge of the arts in the study of other disciplines.

⁵ For a good example of how close observation in visual arts supported the science curriculum, see this 2nd grade example from EL Education. <http://modelsofexcellence.eeducation.org/projects/what-snake-am-i>; Letter to school and district leaders, December 2nd, 2009. <https://blog.americansforthearts.org/2015/09/09/the-political-process%E2%80%A6-what-hope-is-there-for-the-arts-and-arts-education>

Guiding Principle 8

An effective arts education promotes family and community engagement.

In order for students to have authentic opportunities to share their artistic work, effective arts education programs create opportunities to engage with families and the community. Family members often have arts backgrounds to share with students. Local artists and performers, museums, performance spaces, cultural organizations, and arts-related businesses can also contribute to the richness of a school or district arts program. In particular, there should be opportunities for music, theatre, and dance students to perform for families and the community and for visual and media arts students to exhibit their work beyond the school community.

Guiding Principle 9

An effective arts education supports social and emotional growth.

Students develop their social and emotional skills through every subject. The arts are unique because they offer so many opportunities for students to lead others and to practice collaboration. The arts also help students develop their own self-awareness, confidence, and persistence. In doing so, the arts help to deepen respect for others' ideas, cultures, and perspectives. For example, actors develop empathy when they assume roles of characters whose personalities and situations are markedly different from their own. Group performances require cooperation, concentration, listening to colleagues. The thrill of an excellent performance boosts self-confidence. Former Secretary of Education Arne Duncan observed that diverse artistic experiences foster flexibility: "The arts can help students become tenacious, team-oriented problem solvers who are confident and able to think creatively."⁶

Performing and exhibiting artistic work also requires a level of bravery. Psychologist Dr. Carol Dweck of Stanford University, who studies motivation, personality, and development, says the belief that success in the arts is based on talent, rather than effort, leads to thinking that "arts are for some." In contrast, Dweck's "incremental" model proposes that learning results from effort, hence that "arts are for all." Everyone has the capacity to learn any subject at any time, if they have the opportunity to study with a capable teacher and are motivated to learn. As in any subject, all students learn the arts at their own rate. Most accomplish proficiency, and quite a few even reach mastery levels in a given art form.

Guiding Principle 10

An effective arts education program is inclusive; all students participate and benefit.

Effective arts programs provide the necessary supports for all students to meet the standards. The standards allow for the widest possible range of students to fully engage and benefit from the outset with appropriate accommodations as needed while taking into account that not all participants engage in the same manner. Inclusive arts education programs are based in the philosophy that all students can and have the right to express

⁶ Letter to school and district leaders, December 2nd, 2009. <https://blog.americansforthearts.org/2015/09/09/the-political-process%E2%80%A6-what-hope-is-there-for-the-arts-and-arts-education>

themselves in and through the arts. Such programs ensure maximum participation of students with disabilities, English learners, students with minimal experience with the arts, and students who have completed advanced arts training. In the arts, as in any other academic subject, some students may require assistive technologies, others may need more time, practice, or individual help. Regardless, all students must feel welcome in the arts studio, in the practice room, on the stage, or at an exhibition and valued for their artistic insights.

The Standards for Artistic Practice

The Standards for Artistic Practice describe the processes and skills students learn as practitioners throughout the elementary, middle, and high school years in order to achieve artistic literacy. Based on the processes presented in the 2014 *National Core Arts Standards* (NCAS), these practices are grouped into four clusters that focus on creating, presenting/performing, responding, and connecting across the five arts disciplines (dance, media arts, music, theatre, visual art).

While instructional time in the arts is comprised of these four clusters, the amount of time designated to each cluster is flexible and is at the discretion of the district. It is not expected that each cluster will receive equal time during instruction (for example, music may dedicate the majority of its time to performance, whereas visual art may dedicate the majority of its time to creating). However, it is the expectation that each cluster will be represented in a meaningful way within the curriculum. For example, visual arts classes need to ensure adequate time for students to present their art to a diverse range of audiences, just as music students need to have meaningful opportunities to improvise and compose music.

Cluster 1: Creating art with artistic intent.

Artistically literate students generate, organize, and refine artistic ideas using a variety of strategies and tools to serve an intended purpose for their artistic work.

Practice 1. Generate and conceptualize artistic ideas and work.

Through exploration, students generate a wide variety of innovative ideas while expanding the boundaries of connection, style, genre, or medium.

Practice 2. Organize and develop artistic ideas and work. Using a myriad of tools (e.g., brainstorm, sketches, outlines), students plan and organize their ideas to best support their artistic intent.

Practice 3. Refine and complete artistic work. Through a variety of strategies (e.g., teacher or peer feedback, exploration, research, self-reflection), students conceive and revise their artistic ideas to better express, evoke, or communicate their artistic intent.

Cluster 2: Presenting or performing artistic works to evoke, express, or communicate.

Artistically literate students share their creations with an audience or viewers to evoke, express, or communicate an intended purpose or meaning. They recognize choices and make improvements within their own work or performance aligned with their artistic intent.

Practice 4. Select, analyze, and interpret artistic work for presentation. When performing work written by others, students interpret the creator's script or score to convey the artist's intention. When sharing their own work, students reflect on how their performance or presentation best supports their artistic intent.

What are Artistic Ideas?

The term "idea" is used throughout the Framework to represent a building block of an artistic work. This could be a musical motif or sound, or a texture or shape in visual arts.

Practice 5. Develop and refine artistic techniques and work for presentation. Through the practice and development of technical skills, and the refining of details, students polish a work for presentation.

Practice 6. Convey meaning through the presentation of artistic work. Through the presentation of an artistic work, students successfully evoke, express, or communicate the artistic intent.

Cluster 3: Responding to arts through intellect and emotion.

Artistically literate students regularly analyze and evaluate their own and others' works of art, including the work of peers and important artwork from varied historical periods and cultures. These students understand that artistic intent is profoundly intertwined with an artist's cultural milieu, and they use this understanding to guide their own reactions to works of art. Learning to appreciate artistic works is a lifelong cumulative experience. It is fostered through repeated performing, listening, looking, reading, and by pondering questions such as *What did the artist mean to convey? Why has this work of art endured? What makes a work of art significant to its time and place?*

Practice 7. Perceive and analyze artistic work. Through observation of a completed work or exploration of the creative process, students understand how aspects of the artwork, such as the elements and principles of design, support the creator's intent.

Practice 8. Interpret intent and meaning in artistic work. Through observation, discussion, or research, students reflect on an artistic work to discern what it evokes, expresses, or communicates to them.

Practice 9. Apply criteria to evaluate artistic work. Students evaluate an artwork's effectiveness at evoking, expressing, or communicating artistic intent using either self-, group-, teacher-, or externally created criteria.

Cluster 4: Connecting the arts to the self, society, history, culture, and other disciplines and bodies of knowledge.

Artistically literate students discern connections between personal, societal, historical, and cultural contexts as well as multi-disciplinary knowledge when they reflect upon, interpret, respond to, and create artwork. These students understand that diverse forces influence how they view their own artwork as well as the art of others. As artistically literate people, they recognize the powerful influence and impact of the arts on society, history, and culture, as well as their own lives.

Practice 10. Synthesize and relate knowledge and personal experiences to make art. Students draw from their personal and artistic experiences and their multi-disciplinary knowledge when envisioning and creating original art works that reflect their own artistic identity.

Practice 11. Relate artistic ideas and works to societal, historical, and cultural contexts to deepen understanding. Students can articulate how societal, historical, and cultural forces have influenced artistic works, styles and genres, and vice versa.

Organization of the Content Standards

The Framework first groups content standards by **discipline**: dance, media arts, music, theatre, and visual art. The pre-K through grade 8 standards are organized in grade pairs or dyads and standards for the high school grades are organized in courses. The content standards for each grade dyad or high school course are then organized by the four **clusters** of the Standards for Artistic Practice, with at least one **content standard** aligned to each of the eleven practice standards. This intentional, nearly one-to-one relationship between practice and content standards supports vertical (across grades) and horizontal (across disciplines) alignment.

High School Courses

Within each arts discipline, high school content standards are presented in courses.

- **Foundation** courses are introductory or survey courses that high school students typically complete during the first or second year of high school.
- **Proficient** courses are built upon students' work in Foundations courses and begin to focus on specific aspects of the discipline.
- **Advanced** courses are designed to prepare students for post-high school study in the discipline. The Framework includes special advanced courses to address unique features of the disciplines. For example, the Technical Theatre and Musical Composition courses reflect specialized offerings in Theatre and Music respectively.
- Finally, the Framework includes standards for **Novice** Solo & Ensemble Music appropriate for courses designed for students without significant prior experience playing music. These courses may also be appropriate to ensemble courses offered in the middle school grades.

Integration: The standards were written to intentionally highlight the connections across different disciplines and grades. This was done to promote consistency and integration across the arts. For example, students in all disciplines and grades are working on using criteria to evaluate artwork. This practice may look similar or different across the different disciplines, but provides a common structure to support districts in using these standards to organize their arts programs.

Matching Standards and Courses

Educators should look across these standards when determining which best match a course. This Framework is not intended to match every possible course offered in schools. For example, there may not be a good match for a musical appreciation course, but educators could look closely at the responding and connecting practices to help identify which learning standards could guide this type of course.

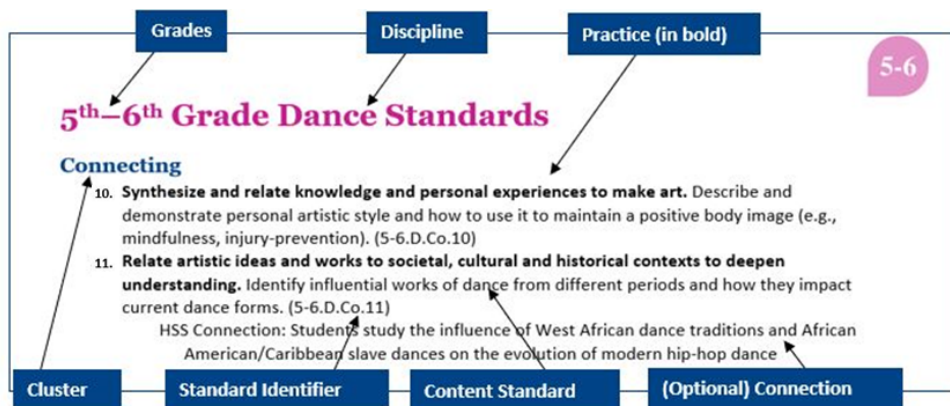

Connections to other bodies of knowledge

A number of direct connections to other disciplines have been identified directly under each content standard applicable. For instance, there are numerous connections to the *Massachusetts History and Social Science Framework* (HSS) indicated throughout the content standards. Educators should note that these connections are examples which they are free to use, modify, replace, or omit as is appropriate for their own arts programs. Since integration is a highly worthwhile approach to pedagogy, teachers are encouraged to make meaningful connections to other relevant bodies of knowledge whenever possible, including other arts disciplines.

Standards Organization

The standards are organized by discipline, with a page for each grade dyad (Pre-K–K, 1–2, 3–4, 5–6, 7–8) or high school course (Novice, Foundation, Proficient, Advanced). The standards are organized into the four clusters, with each practice in bold, followed by the content standard and standard identifier.

Each standard has a unique standard identifier following content standard, as shown in the example below. The identifier consists of the grade dyad or course, discipline initial, cluster, and artistic practice, and a lowercase letter if necessary.

For example, the standard “Identify influential works of dance from different periods and how they impact current dance forms” would be coded 5–6.D.Co.11 since this standard is for grades 5 and 6, in dance, and related to Practice 11. If there are multiple standards related to a single practice in the same grade dyad, discipline, and cluster they are distinguished by a lower-case letter.

English Learners and Inclusion

Application of Standards for English Learners and Students with Disabilities

English Learners

The Massachusetts Department of Elementary and Secondary Education (DESE) strongly believes that all students, including English learners (ELs) should be held to the same high expectations outlined in the Curriculum Framework. English learners may require additional time and support as they work to acquire English language proficiency and content-area knowledge simultaneously. Further, developing proficiency in English takes time, and arts teachers should recognize that it is possible to meet the standards for artistic content and practices as students become fluent in English.

The structure of programs serving ELs in Massachusetts acknowledges that ELs acquire language while interacting in all classrooms. All educators, including arts teachers, are responsible for students' language development and academic achievement. Collaboration and shared responsibility among administrators and educators are integral to student and program success. DESE uses the term English language development (ELD) to describe all of the language development that takes place throughout a student's day, both during content classes including arts classes and in ESL classrooms.

Districts in Massachusetts must provide EL students with both grade-level academic arts content and ESL instruction that is aligned to the Curriculum Frameworks as outlined in state guidelines for EL programs. DESE's Office of Language Acquisition (OLA) offers a number of resources to help districts meet these expectations, including a [Next-Generation ESL Curriculum Resource Guide](#).

Regardless of the specific curriculum used, all ELs in formal educational settings must have access to:

- District and school personnel with the skills and qualifications necessary to support ELs' growth.
- Literacy-rich environments where students are immersed in a variety of robust language experiences.
- Speakers of English who know the language well enough to provide models and support.

Yet English learners are a heterogeneous group, with differences in cultural background, home language(s), socioeconomic status, educational experiences, and levels of English language proficiency. Educating ELs effectively requires diagnosing each student instructionally, tailoring instruction to individual needs, and monitoring progress closely and continuously. For example, ELs who are literate in a home language that shares cognates with English can apply home-language vocabulary knowledge when reading in English; likewise, those with extensive schooling can use conceptual knowledge developed in another language when learning academic content in English. Students with limited or interrupted formal schooling (SLIFE) may need to acquire more background knowledge before engaging in the educational task at hand.

For more on types of English Learner Education (ELE) programs in Massachusetts, please see [Guidance on Identification, Assessment, Placement, and Reclassification of English Language Learners](#).

Six key principles should therefore guide instruction for ELs:

- Instruction focuses on providing ELs with opportunities to engage in arts-specific practices that build conceptual understanding and language competence in tandem.
- Instruction leverages ELs' home language(s), cultural assets, and prior artistic knowledge.
- Standards-aligned instruction for ELs is rigorous, grade-level appropriate, and provides deliberate, appropriate, and nuanced scaffolds.
- Instruction moves ELs forward by taking into account their English proficiency level(s) and prior schooling experiences.
- Instruction fosters ELs' autonomy by equipping them with the strategies necessary to comprehend and use language in arts classrooms.
- Responsive diagnostic tools and formative assessment practices measure ELs' arts content knowledge, language competence, and participation in artistic practices.

In sum, the Massachusetts Arts Curriculum Framework articulates rigorous developmentally appropriate expectations in the standards for arts content and artistic practice to prepare all students, including ELs, for postsecondary education, careers, and everyday life. This document can be used in conjunction with language development standards designed to guide and monitor ELs' progress toward English proficiency. Many English learners also benefit from instruction on negotiating situations outside of schooling and career—instruction that enables them to participate on equal footing with English proficient peers in all aspects of social, economic, and civic life. Whether academic, linguistic, or social, support for ELs must be grounded in respect for the great value that multilingualism and multiculturalism add to our society.

Students with Disabilities

The Massachusetts Arts Curriculum Framework articulates rigorous developmentally appropriate expectations. These learning standards identify the artistic knowledge and skills all students need in order to be successful in college and careers and in everyday life. Students with disabilities—students eligible under the Individuals with Disabilities Education Act (IDEA)—must be challenged to excel within the general arts curriculum and be prepared for success in their post-school lives, including college and/or careers. The standards provide an opportunity to improve access to rigorous arts content for students with disabilities. The continued development of understanding about research-based instructional practices and a focus on their effective implementation will help improve access to the arts content standards and the artistic practice standards for all students, including those with disabilities.

Students with disabilities are a heterogeneous group. Students who are eligible for an Individualized Education Program (IEP) have one or more disabilities and, as a result of the disability/ies, are unable to progress effectively in the general education program without the provision of specially designed instruction, or are unable to access the general curriculum without the provision of one or more related services (603 CMR 28.05 (2)(a)(1)). How these high standards are taught and assessed is of importance in reaching students with diverse needs.

In order for students with disabilities to meet high academic standards, their arts instruction must incorporate individualized instruction and the related services, supports, and accommodations necessary to allow the student to access the general arts curriculum. The annual goals included in students' IEPs must be carefully aligned to and facilitate students' attainment of grade-level learning standards.

Promoting a culture of high expectations for all students is a fundamental goal of the Massachusetts Curriculum Frameworks. In order to participate successfully in the general curriculum, students with disabilities may be provided additional supports and services as identified in their IEPs, including:

- Instructional learning supports based on the principles of Universal Design for Learning (UDL) which foster student engagement by presenting information in multiple ways and allowing for diverse avenues of demonstration, response, action, and expression. UDL is defined by the Higher Education Opportunity Act (PL 110-135) as “a scientifically valid framework for guiding educational practice that (a) provides flexibility in the ways information is presented, in the ways students respond or demonstrate knowledge and skills, and in the ways students are engaged; and (b) reduces barriers in instruction, provides appropriate accommodations, supports, and challenges, and maintains high achievement expectations for all students, including students with disabilities and students who are limited English proficient.”
- Instructional accommodations (Thompson, Morse, Sharpe & Hall, 2005), such as alternative materials or procedures that do not change the standards or expectations, but allow students to learn within the framework of the general curriculum.
- Assistive technology devices and services to ensure access to the general education curriculum and the Massachusetts standards for arts.

Some students with the most significant cognitive disabilities will require substantial supports and accommodations to have meaningful access to certain standards in both instruction and assessment, based on their expressive communication and academic needs. These supports and accommodations must be identified in the students’ IEPs and should ensure that students receive access to multiple means of learning, and opportunities to demonstrate knowledge, but at the same time retain the rigor and high expectations of the Arts Curriculum Framework.

Pre-K–12 Sequential Development of Singing Skills

Foundational Experience Sequence in Music: Development of Singing

Singing provides an essential learning process for music students of all ages. It should be a foundational centerpiece in all general music classes and ensembles from preschool through high school.

All people carry a musical instrument wherever they go—their singing voices. Through consistent and competent instruction that provides excellent vocal modeling, everyone can learn to sing expressively, accurately, in-tune, and with healthy vocal production. Singing provides music teachers with a quick way to assess student learning—if students can sing a musical element or demonstrate a musical concept using their singing voices, this concrete evidence shows that they can accurately decode what they are hearing or reading and reproduce it.

Singing is live music-making that provides all people with enjoyable opportunities to be active lifelong musical participants. It enables people of all ages to engage in community choral groups and ensembles. Singing well builds confidence and assists in developing strong presentation and collaborative skills. As such, singing enables positive social-emotional learning and growth for each student.

The following pre-K–12 Singing Skill Sequence provides benchmarks showing how to develop both in-tune singing as well as healthy vocal technique and habits.

By the end of each grade span, the majority of students should be able to:

Scientific research into the stages of learning how to sing: “The Effect of Teacher Feedback and Modeling on First Graders' Use of Singing Voice and Developmental Music Aptitude.” Joanne Rutkowski and Martha Snell Miller. *Bulletin of the Council for Research in Music Education*, No. 156 (Spring 2003), pp. 1–10, University of Illinois Press.

According to the authors, the following stages of singing development may occur:

1. "Pre-singer" does not sing but chants the song text.
- 1.5. "Inconsistent Speaking Range Singer" sometimes chants, sometimes sustains tones and exhibits some sensitivity to pitch but remains in the speaking voice range (usually A3 to C4*).
2. "Speaking Range Singer" sustains tones and exhibits some sensitivity to pitch but remains in the speaking voice range (usually A3 to C4).
- 2.5. "Inconsistent Limited Range Singer" wavers between speaking and singing voice and uses a limited range when in singing voice (usually up to F4).
3. "Limited Range Singer" exhibits consistent use of limited singing range (usually D4 to F4).
- 3.5. "Inconsistent Initial Range Singer" sometimes only exhibits use of limited singing range, but other times exhibits use of initial singing range (usually D4 to A4).
4. "Initial Range Singer" exhibits consistent use of initial singing range (usually D4 to A4).
- 4.5. "Inconsistent Singer" sometimes only exhibits use of initial singing range, but other times exhibits use of extended singing range (sings beyond the register lift: B4-flat and above).
5. "Singer" exhibits use of consistent extended singing range (sings beyond the register lift: B4-flat and above).

*All pitches adjusted to align to the previous Octave Identification Chart

Note: Of course, many children are likely to skip steps and start singing quite accurately early in their development.
