# Can you run multiple instances of Zello For Work?

Running multiple instances can allow you to run multiple gateways and Zello For Work networks from one PC. You can safely run up to 8 instances from one PC.

## Create Multiple Shortcuts

To run multiple instances follow the steps below:

1. Open the Zello For Work app and click on Tools > Options > check "Allow multiple instances of the program".
2. Exit out of Zello For Work
3. Copy the shortcut and paste again.
4. Rename the new shortcut to Zello For Work B
5. Open your Program files (x86), if this is where Zello For Work was saved, and copy the folder and paste into the Program files again. Rename the folder to Zello For Work B.
6. Right click on shortcut Zello For Work B and select properties.
7. Change the target to match the name of the shortcut. If it matches the previous steps and location in your PC, it should be exactly like this: "C:\Program Files (x86)\Zello for Work B\ptt.exe" /instance=B.
8. Double click on the shortcut you created, and enter username and password you want to use for that instance. Click Sign In.
9. If you want the instances to start when computer starts copy the shortcuts to a windows Startup folder
10. Repeat steps 3 through 9 for each instance you need to configure.

## Multiple Networks In One PC

To sign in using a different network follow the steps below:

1. Open your Program Files and open the Zello For Work folder.
2. Open the servers CONFIG File inside the folders, and change the "network":"NetworkYouWant"
