

WHAT IS SPOT TRADING?

Spot trading is the simplest and most common way to buy and sell cryptocurrency. When you do **spot trading**, you are buying a crypto asset (like TEXTITcoin) **at the current market price** and you **own it immediately** once the transaction is complete.

✓ Key Points About Spot Trading

Feature	Description
Ownership	You own the crypto after purchase
Payment method	Uses real funds (like USDT)
Delivery	Instant once the order is filled
Risk level	Lower than futures or leverage trading
Best for	Beginner and long-term holders

🔄 Example

If TX is trading at **\$2.80**, and you buy **100 TX** using spot trading:

- You pay **\$280 USDT**
- You now **own 100 TX** in your wallet
- You can withdraw it, hold it, or sell it later

⚠️ Spot vs Other Types of Trading

Type of Trading	What it does	Risk
Spot ✓	Buy/sell real crypto at current price	Low
Margin ⚠️	Borrow money to trade more	High
Futures ⚠️ ⚠️	Betting on future price	Very high

Most people buying real crypto **stick with spot trading**, especially when buying coins like **TEXTITcoin (TX)** on Dex-Trade.
