

CRANK-OUT CAMERA (or known as EXPOSURE DEVICE)

GOAL: This worksheet is designed to help students identify the major components of a crank-out exposure device system and understand the basic process of cranking the radioactive source out and returning it to the shielded position inside the exposure device. Students should also understand the importance of performing a post-exposure radiation survey of the exposure device after each exposure. Review the workflow demonstration videos and study Chapter 7 of your classroom textbook while completing this worksheet.
