

#### STANDBY POWER

Applicable for supplying power to varying electrical load for the duration of power interruption of a reliable utility source. Overload is not allowed.

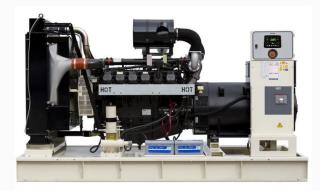

#### PRIME POWER

The maximum power which a generating set is capable of delivering continuously whilst supplying a variable electrical load. Average load should be 70%. The generator can be overloaded 10% for 1 hour per 12 hrs.

#### **CONTINUOUS POWER**

Continuous power rating is used in applications where supplying power is at a constant 100% load for an unlimited number of hours each year. Continuous power rated units are most widely used in applications where the power grid is unreachable.
