## Chapter 5

Rational Exponents and Radical Functions
Section 5-6
Inverse of a Function

Functions that undo each other are inverse functions.
\(\left.$$
\begin{array}{c}\text { Input } \\
\begin{array}{l}\text { Function } \\
3\end{array} \\
f(x)=x+6\end{array}
$$ \longrightarrow \begin{array}{c}Output <br>

9\end{array}\right]\)| Output |
| :---: |
| 3 |

# To find the inverse function, switch $x$ and $y$, and then solve for $y$. 

## EXAMPLE 1 Writing a Formula for the Input of a Function

Let $f(x)=2 x+3$.
a. Solve $y=f(x)$ for $x$.
b. Find the input when the output is -7 .

Notice that these steps undo each other. Functions that undo each other are called inverse functions. In Example 1, you can use the equation solved for $x$ to write the inverse of $f$ by switching the roles of $x$ and $y$.

$$
f(x)=2 x+3 \quad \text { original function } \quad g(x)=\frac{x-3}{2} \quad \text { inverse function }
$$

Because inverse functions interchange the input and output values of the original function, the domain and range are also interchanged.

Original function: $f(x)=2 x+3$

| $x$ | -2 | -1 | 0 | 1 | 2 |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| $y$ | -1 | 1 | 3 | 5 | 7 |  |
| Inverse function: $g(x)=\frac{x-3}{2}$ |  |  |  |  |  |  |
| $x$ | -1 | 1 | 3 | 5 | 7 |  |
| $y$ | -2 | -1 | 0 | 1 | 2 |  |

The graph of an inverse function is a reflection of the graph of the original function. The line of reflection is $y=x$. To find the inverse of a function algebraically, switch the roles of $x$ and $y$, and then solve for $y$.

## EXAMPLE 2 Finding the Inverse of a Linear Function

Find the inverse of $f(x)=3 x-1$.

Find the inverse of the function. Then graph the function and its inverse.

- 4. $f(x)=2 x$
( 6. $f(x)=\frac{1}{3} x-2$

| $X$ | $Y$ |
| :--- | :--- |
|  |  |
|  |  |
|  |  |
|  |  |
|  |  |
|  |  |

| $X$ | $Y$ |
| :--- | :--- |
|  |  |
|  |  |
|  |  |
|  |  |
|  |  |
|  |  |

## Inverses of Nonlinear Functions

In the previous examples, the inverses of the linear functions were also functions. However, inverses are not always functions. The graphs of $f(x)=x^{2}$ and $f(x)=x^{3}$ are shown along with their reflections in the line $y=x$. Notice that the inverse of $f(x)=x^{3}$ is a function, but the inverse of $f(x)=x^{2}$ is not a function.

When the domain of $f(x)=x^{2}$ is restricted to only nonnegative real numbers, the inverse of $f$ is a function.

You can use the graph of a function $f$ to determine whether the inverse of $f$ is a function by applying the horizontal line test.

## G) Core Concept

## Horizontal Line Test

The inverse of a function $f$ is also a function if and only if no horizontal line intersects the graph of $f$ more than once.

Inverse is a function

Inverse is not a function

## EXAMPLE 3 <br> Finding the Inverse of a Quadratic Function

Find the inverse of $f(x)=x^{2}, x \geq 0$. Then graph the function and its inverse.

## EXAMPLE 4 Finding the Inverse of a Cubic Function

Consider the function $f(x)=2 x^{3}+1$. Determine whether the inverse of $f$ is a function. Then find the inverse.

## EXAMPLE 5 Finding the Inverse of a Radical Function

Consider the function $f(x)=2 \sqrt{x}-3$. Determine whether the inverse of $f$ is a function. Then find the inverse.

Let $f$ and $g$ be inverse functions. If $f(a)=b$, then $g(b)=a$. So, in general,

$$
f(g(x))=x \quad \text { and } \quad g(f(x))=x .
$$

## EXAMPLE 6 Verifying Functions Are Inverses

Verify that $f(x)=3 x-1$ and $g(x)=\frac{x+1}{3}$ are inverse functions.
