The iconic Zippi Redline design is not like other twin fins. The typical twin fin may have you nursing the turns or continually pumping to keep the board going. Zippi keel twin fins want you to power surf them. The more power you put into the turns the more speed and power you get back. You will feel like you can make any wave that you take off on. From 2 foot slop to double overhead perfection this board is a complete quiver killer. You may find yourself riding it on bigger waves than you thought possible because of the speed and power it offers. Although the design has an old school retro look don't be fooled the performance will surprise you. This is what has made this design favorite twin fin of so many surfers for decades!
