

## Regional Freight Services Ltd

As an established freight forwarding company with offices in Norwich, Heathrow and Bristol who many years ago decided to use Forward Computers Ltd. as the main supplier of our operational systems and Sage Line 500 to handle the financial accounting, all based around the SCO Unix operating system.

The FCL link from Carlins Software Solutions Ltd. was installed as part of the two way interface between Sage and the FCL system. This has worked flawlessly for over 15 years.

We are currently exploring the upgrade of our forwarding system to a Linux platform along with an upgrade of Sage to Version 6. This will entail an upgrade of the FCL link to ThinkLink to import the details from the forwarding operational system and a Bespoke Add-on to export the customer account balances back to the forwarding system.

Our experience has been so good that we have no reservations in selecting Carlins Software Solutions who will provide this new link from their existing portfolio of programs and interfaces.
