Testimonial : Carlins Software Solutions, In Use @ Weldability Sif

As a loyal user of Tetra 2000 accounts software on SCO Unix for many years, Weldability Sif have relied upon ThinkLink and TextGen from Carlins Software to enable smooth transfer of data between the Tetra 2000 ERP platform and their SQL/ASPX in-house middleware, which drives their Intranet, Website, Warehouse Management Software and Mobile Sales Apps.

Weldability Sif are a manufacturer and distributor of welding consumables and equipment, and use Tetra 2000 mainly to manage their ledgers, despatches and inventory. Data is piped into the Tetra 2000 modules (such as Sales Order Entry and Purchase Orders) via ThinkLink from the external, bespoke VB/Web Apps, allowing their more modern, custom front-end systems to drive the Weldability Sif ordering processes in a device-independent, browser-based environment.

Data on order status and inventory is automatically exported from Tetra 2000 via TextGen and imported into the Weldability Sif intranet via the SQL/ASPX middleware, then used to provide realtime data on stock availability and transactions to the Weldability Sif sales team, which is then replicated online for global accessibility via the Weldability Sif website and e-commerce applications (www.weldability-sif.com).

Carlins have also assisted Weldability Sif in the creation of invoices as XML files, exported by TextGen in the BASDA/EDIFACT standard schema, which is converted to PDF by the Weldability Sif middleware and emailed to customers, providing electronic invoicing and EDI capability – without requiring a change in ERP software.

Weldability Sif would confidently recommend Carlins Software Solutions to any business looking to achieve greater functionality from the Tetra/Sage platforms and save themselves the cost and pain of changing accounts software.
