

Transgenderland is a Transgender visibility project created by Dr. Moz Lee St. Pierre, DHA, MPH, MFS of St. Albans, Vermont. Dr Moz completed his Doctor of Health Administration and doctoral research related to transgender health and stigma in 2021. Transgenderland is an example of how built communities can promote health and well-being through factors such as social health, emotional health, mental health, and financial health.

The project merges technology and individuals from around the world to demonstrate that community stands strong despite distance. In fact, the biggest strength of the Transgenderland project is that NFT art has been sourced from people all over the world who want to extend a hand and build community through positive images. Most of the images have been created specifically for Transgenderland. You can donate, buy, or sell your own art by visiting Transgenderland on DeSo (Decentralized Social Media). Transgenderland is also a new way to build financial prosperity together as a community while maintaining individual artist royalties per sale. To learn more or get involved please visit Micdrop Health LLC, proudly a Vermont company. <https://micdrophealth.godaddysites.com/transgenderland>

QR Codes found directly on the artwork that is displayed lead to informational pages or art galleries from contributing artists! All art may be viewed for free on DESO. NFTs may be purchased and owned on DESO. The display is only a selection of available NFT art!

DISPLAY BONUS: VERMONT & MAPLE IMAGES INCLUDED FOR A SHORT TIME

HAPPY MAPLE FESTIVAL

Sincerely,
@DrMoz
