**ULTRA
NOZZLE**

TATSUNO

In Innovation, In Reliable Services

ULTRA NOZZLE

Achievement of Safe Refueling

Automatic shut-off mechanism works even when the amount of oil is small

World's Best Operability

Requires less than half of the force to operate compared to the former nozzle

Environmentally Friendly

Reduced the amount of petrol vapour generated during refueling

Shorter Time to Fill Tank up to Full

No need to pull the lever again and again, since foaming of oil is so small

Adaptable to Wide Range of Vapour Recovery System

Development of A/L vapour valve that could adjust recovery percentage

ULTRA NOZZLE

FN1024

- Light nozzle that enables smooth handling
- Light lever and swivel that assists stress-free operation
- Automatic shut-off mechanism that works with minimum flow of 2L/min
- Need only small amount of force to pull the lever

ULTRA NOZZLE *Vapour Recovery*

FN1025

- Astonishing lightness for vapour recovery nozzle
- Automatic shut-off mechanism that works with minimum flow of 2L/min
- Rubber boots that collect vapour efficiently
- Small amount of emission of VOC during refueling

Stress-free, High-efficiency, Smooth-handling – This nozzle is top-level in all functions!

Lightest nozzle which achieve stress-free refueling

You only need to pull the lever gently to use this nozzle. Whether you are left-handed or right-handed, you could refuel easily and without stress.

Double swivel

Original technology to fill tank up to full quickly

This time-saving nozzle uses discharging mechanism that prevents from foaming.

You don't need to pull the lever again and again to fill tank up to full.
