

HOW ARE MEMORY BLOCKS INSTALLED?

The back of each Memory Block has been finished with an aperture for hanging. This 6x8" card is the same size as your Memory Block and can be used as a simple hanging template.

1 Pierce a small hole in the centre of the X here

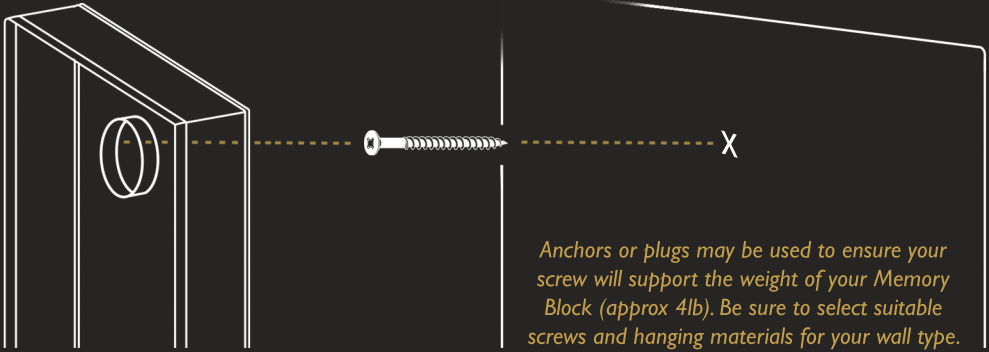

2 Carefully tape this card to where you want to hang your block.

3 Use the hole to mark where you will insert your screw.

4

After measuring and marking your display location on the wall, simply take a screw and insert it into the wall. ~0.5 inches of the screw should be exposed to hang the Memory Block.

Anchors or plugs may be used to ensure your screw will support the weight of your Memory Block (approx 4lb). Be sure to select suitable screws and hanging materials for your wall type.

CARE INSTRUCTIONS

As every Memory Block is handmade, each will have small differences. Their appearances will vary depending on the elements and how they're produced. Through time, there may be slight changes to the block due to the environment it sits in. This is what makes a Memory Block unique and adds to its story!

Sid Dickens Memory Blocks, like any fine art, are the best displayed in a climate controlled environment.

Please ensure that your blocks are placed away from direct/indirect sunlight as exposure to the elements or moisture can cause the blocks to fade and/or discolour.

Dust can be cleaned off by using a soft clean cloth. Do not use water, solvents, varnishes or cleaning products directly on these pieces.
