

Good News Friday Edition 1 – Electric Vehicle Conversion Kit

TRANSITION ONE – ELECTRIC VEHICLE CONVERSION KIT

If you are like me and love your old car and live with a reuse, repair, recycle attitude but at the same time feel conflicted because you want to reduce carbon emissions and electric / hybrid vehicles are currently too expensive then this could be the solution for you in the very near future.

A French Company (Transition One) has designed an electric vehicle conversion kit for old cars that is affordable – and will even be subsidised by the French Government to make it even more affordable. These kits will be available in Europe from 1st Quarter 2023 with the plan of being fitted by your local mechanic... so just like getting your service you drop your car off in the morning and pick your electric vehicle in the afternoon. The current kits are for city cars with 100km range. For more info see the link below...
