C.A.R.'s pending sales information is generated from a survey of more than 70 associations of REALTORS® and MLSs throughout the state. Pending home sales are forward-looking indicators of future home sales activity, offering solid information on future changes in the direction of the market. A sale is listed as pending after a seller has accepted a sales contract on a property. The majority of pending home sales usually becomes closed sales transactions one to two months later. The year 2008 was used as the benchmark for the pending homes sales index. An index of 100 is equal to the average level of contract activity during 2008.

C.A.R.'s pending sales information is generated from a survey of more than 70 associations of REALTORS® and MLSs throughout the state. Pending home sales are forward-looking indicators of future home sales activity, offering solid information on future changes in the direction of the market. A sale is listed as pending after a seller has accepted a sales contract on a property. The majority of pending home sales usually becomes closed sales transactions one to two months later. The year 2008 was used as the benchmark for the pending homes sales index. An index of 100 is equal to the average

NAR receives data from over 100 MLSs & 60 large brokers across the nation. An index of 100 is equal to the average level of contract activity during 2001, the first year to be analyzed. 2001 sales are fairly close to the higher level of home sales expected in the coming decade relative to the norms experienced in the mid-1990s. As such, an index of 100 coincides with a historically high level of home sales activity.

**ASSUMPTIONS AND METHODOLOGY USED TO CALCULATE
C.A.R.'S TRADITIONAL HOUSING AFFORDABILITY INDEX (HAI)* & FIRST-TIME BUYER
HOUSING AFFORDABILITY INDEX (FTB-HAI)**

Step 1. MEDIAN PRICE: C.A.R.'s traditional housing affordability index is based on the median price of existing single-family homes sold from C.A.R.'s monthly existing home sales survey. Starting in 1987, this survey is based on reports of closed escrow sales from 80 Boards or more of REALTORS and multiple listing services around the state. Prior to 1987, the survey was based on reports from 45 Boards. The FIRST-TIME BUYER housing affordability index is based on an entry-level home at a price equal to 85 percent of the prevailing median price for existing homes.

Step 2. DOWNPAYMENT: For the traditional HAI, it is assumed that a household can make a 20 percent downpayment on the median-priced home. Therefore, the loan amount needed to purchase a home would be 80 percent of the median home sales price. The FIRST-TIME BUYER is assumed to make a 10 percent downpayment. Therefore, the loan amount needed to purchase a home would be 90 percent of the median home sales price for the FTB-HAI.

Step 3. INTEREST RATE: Using the national average effective mortgage interest rate on all fixed and adjustable rate mortgages closed for the purchase of previously occupied homes as reported monthly by the Federal Housing Finance Board, the monthly payment on a 30-year loan is calculated for the traditional HAI. A FIRST-TIME BUYER is assumed to finance the home purchase with an adjustable rate mortgage (ARM), therefore this rate is used to calculate the FTB-HAI. This is represented by the effective composite ARM for previously occupied homes, which is reported monthly by the Federal Housing Finance Board.

Step 4. The monthly payment for PRINCIPAL, INTEREST, TAXES AND INSURANCE (PITI) is computed as the sum of three parts:

- ☐ Monthly mortgage payment, based on the terms of the mortgage in Steps 2 & 3.
- ☐ Monthly PROPERTY TAXES are assumed to be 1 percent of the median home sales price divided by 12.
- ☐ Monthly INSURANCE PAYMENTS on the house are assumed to be 0.38 percent of the median home sales price divided by 12.

The results of these three calculations are added together to find the PITI or total monthly payment for a household that buys the median priced home for both indices based on their respective assumptions in the first three steps.

Step 5. It is then assumed that the monthly PITI can be no more than 30 percent of a household's income for the traditional HAI and 40 percent of a household's income for the FTB-HAI. Thus, the monthly housing payment is divided by .4 to come up with the MINIMUM INCOME NEEDED TO QUALIFY FOR A LOAN on the median-priced home.

Step 6. Starting in 1988, data for the distribution of households by various income ranges was obtained from Claritas. INCOME DISTRIBUTION figures were developed based on the projected percent change in the annual median household income and were the same for both the traditional HAI and the FTB-HAI. Prior to 1988, household income utilized in the housing affordability index was based on projections by C.A.R. using the 1980 census data as a base.

Step 7. The minimum income amount calculated in Step 5 is multiplied by 12 to determine the minimum annual income needed to qualify. This amount is compared to the income distribution of households. The percent of the households with incomes greater than or equal to the minimum income becomes the TRADITIONAL HOUSING AFFORDABILITY INDEX and/or the HOUSING AFFORDABILITY INDEX FOR FIRST-TIME BUYERS (HAI-FTB).

NOTE: The quarterly HAI and HAI-FTB for a given geographic area in a particular quarter is based upon the quarterly median price for that area as well as the quarterly income distribution for that area.

SOURCE OF C.A.R. DATA

Associations of REALTORS® Reporting Sales and Home Price Information

The existing home sales and median price data is compiled on the basis of monthly reports from 90 reporting entities comprising both individual and regionalized multiple listing Associations of REALTORS®. Regional data is not seasonally adjusted. Movement in regional sales prices should not be interpreted as measuring changes in the cost of a standard home. Prices are influenced by changes in costs and variations in the characteristics and size of homes actually sold.

Central Valley	Bakersfield, Fresno, Hetch Hetchy, Lodi, Manteca, Mariposa, Merced, Modesto, Oakdale, Sacramento, Stockton, Tracy, Tulare, Tuolumne, and Turlock
