MANTA

Data Affect x MANTA:

Detailed Technical Collateral

Data Affect and MANTA work together to deliver an integrated, enriched, and consolidated lineage platform that provides data users with the actionable intelligence needed to handle a variety of projects.

MANTA is the central hub of all data flows in an organization, and with its lineage capabilities, it enables digital transformation. The platform allows information users to understand how data flows through all their systems and delivers actionable intelligence to boost governance efforts, accelerate development, shorten time-to-market, speed up the modernization process, ensure data quality, and enforce data security

Our scanners connect to various parts of your environment, automatically gather all metadata, and reconstruct complete lineage. You can then visualize the lineage in our native viewer app on the level of detail that meets your needs. MANTA is here to help with any task—you can search through all the lineage, focus only on selected parts, review previous versions, share your lineage visualizations with others within the organization, and a lot more.

PLATFORM DESCRIPTION

Every organization uses data to stay relevant and competitive while undergoing a constant digital transformation process.

This process creates bigger and more complex systems with millions of data flows, where trust in data is undermined, operational costs are skyrocketing, and every change has unpredictable consequences.

MANTA's lineage platform allows information users and administrators to clearly see the origins of data and its journey through all data-processing systems. MANTA can help more than just a team, it can help an entire company navigate this information and deliver actionable intelligence to boost governance efforts, accelerate development, shorten time-to-market, speed up the modernization process, ensure data quality, and enforce data security

Data Affect specializes in IT business consulting for enterprise data strategy, data governance, data integration, and data security and privacy. We work with executives and IT leaders and provide operational, tactical data management expertise with immediate data insight, helping you drive value across your business. We specialize in creating well-defined data governance strategies with processes for governing how, when, and with whom your data is being used.

MANTA

SOLUTION DESCRIPTION

We wanted to improve our customers' data governance journey by providing them with the ability to trace their enterprise assets back to their sources in an automated way using MANTA.

JOINT BENEFITS

Our partnership allows us to provide Data Affect's customers with hard-to-get, yet critical metadata in an automated way, in turn, allowing Data Affect to truly enrich their customers' data governance strategies and positively affect various enterprise engagements.

USE CASE

Going forward, MANTA's technology will enable Data Affect's customers to consolidate technical metadata and deliver trusted reporting; this will provide comprehensive insights on the impact of alterations and updating of IT systems. It will also help our clients meet their compliance goals for GDPR, CCPA, and a variety of other industry regulations
