

Job Title: Infrastructure Cabling Engineer

NO AGENCIES

About us.

We are looking for candidates to join our Data Centre and IT Solutions team who are not only capable of working on customer sites, but who also have a desire to challenge themselves, learning new technologies and skills and progress within the company as opportunities arise. We actively encourage and support our employees with personal development and are focused on ensuring our employees are at the core of our future business model.

About the role.

This role is Field based out of our Gloucester Office with travel locally and around the UK as required.

We are looking for Infrastructure Cabling Engineer who has experience within the Commercial sector on the installation of structured cabling.

As a Infrastructure Cabling Engineer you will be working either on your own or within a small team.

A part of this role will include installation of containment systems to house electrical and IT infrastructure.

Due to the nature of small team working, you will be expected to assist in other areas such as electrical infrastructure (training will be given) and engaged as a team member highlighting improvements and identifying opportunities for enhancements.

Experience Required:-

- A background in structured cabling.
- Experience in both Cat 5/5e/6/6a
- Experience in both Multimode and Single-mode fibre installation, terminating and testing.
- Experience in containment, racks, and cabinets.
- Knowledge & experience setting up and using a Fluke DSX 5000 tester or equivalent.
- Knowledge and ability to use a range of relevant tools and materials.
- Be able to work as part of a team and independently.
- Good understanding of and attitude to Health & Safety requirements.
- Flexible attitude and motivated approach to work.
- Full Clean UK driving license (company vehicle provided).
- Good representation and appearance for the company at all times.
- Good attention to detail.
- Basic IT skills (including electronic submission of time sheets).
- Adapt to technical changes within the industry and attend training courses should they be required.

- CSCS Card will be required.
- IPAF – Desirable and full training will be given
- PASMA – Desirable and full training will be given
- Flexibility to work outside of normal working hours where required and stay away from home for short periods throughout the working week.

Key Skills:-

A proven history working Infrastructure Installation Engineer

Experience in both Cat 5/5e/6/6a

Experience in both Multimode and Single-mode fibre installation, terminating and testing

Full UK Driving Licence

Security clearance or a willingness to undergo clearance preferred.

What you will get from us:-

- Competitive Salary.
- Company vehicle provided.
- Uniform.
- Company Pension Scheme
- Social Events.
- 25 Days Holiday Plus Bank Holidays,
