AIR-SEP® 4.0 - Pressure maintenance units with AIR-SEP® SmartControl

New and intuitive operating concept with touch screen colour display

AIR-SEP® SmartControl is a new, fully integrated and freely programmable microprocessor control. It automatically and independently controls and monitors PRESSURE MAINTENANCE, EXPANSION, DEGASSING and RESUPPLY. The touch screen colour display is operated just by a touch of the fingertip.

AIR-SEP® SmartControl overview:

- TFT touch screen colour display with digital pressure indication
- Fully integrated and freely programmable microprocessor control
- Multifunctional control with fully automatic regulation and monitoring of pressure maintenance, expansion, degassing and resupply
- Automatic and independent operation of AIR-SEP® ION (softening) or AIR-SEP® VE (complete desalination) devices with residual capacity indication
- Graphic menu, real time clock, SD card slot, error memory, potential-free collective error message as well as the recording and monitoring of the resupply accurate to the litre and much more
- Optional MODBUS/TCP interface (via AIR-SEP® SmartControl Interface)

Completely new and intuitive operating concept with touch screen colour display.

Price list 2023

AIR-SEP® Pressure maintenance, degassing, expansion and resupply with touch screen colour display – ALL IN ONE UNIT

- ▶ Type AS-T 20/2, AS-T 20/4 und AS-T 20/6
- ▶ Type AS-T 48/4 und AS-T 48/6

- pressure maintenance units with control system AIR-SEP® SmartControl (operation via touch screen colour display)
- fully integrated and freely programmable microprocessor control
- fully automatic operation of AIR-SEP® ION (softening) and AIR-SEP® VE (complete desalination) devices with residual capacity indication
- **tank made of stainless steel** for the storage of expansion water, up to a maximum of 95°C (except Type -K, maximum of 55°C)
- unpressurised tank, sealed to the atmosphere
- optionally available with cover, see accessories
- overflow valve, pressure holding pump, quiet in operation
- electrical connection: 230VAC/50Hz

Z1, Z1E, Z2 and Z4 is included when ordering Air-Sep, following prices are for retail.			
Accessory 1	Z1	Fresh water connection in line with DIN 1988 and DIN EN 1717 including DVGW approved system separator type BA and water volume meter	8 952
Accessory 1E	Z1E	Fresh water connection with stainless steel non-return valve and water volume meter (with an existing system separation or without respective legal system requirements)	3 654
Accessory 2	Z2	Connection system DN15 (2 flex. tubes, ball valve, cap ball valve)	1 820
Accessory 4	Z4	Cleaning opening for AS-T 20/.. and AS-T 48/..	2 100
Magnetitefilter	AS-MF	Magnetite filter for mounting on the bottom of the tank	4 400

AIR-SEP® Pressure maintenance, degassing, expansion and resupply with touch screen colour display – ALL IN ONE UNIT
► Type AS-T 100/x bis AS-T 2400/x (up to 6,5bar)

- pressure maintenance units with control system AIR-SEP® SmartControl (operation via touch screen colour display)
- fully integrated and freely programmable microprocessor control (graphic menu, real-time clock, SD card slot, error memory, potential-free collective error message as well as the monitoring of the resupply accurate to within a litre and much more)
- fully automatic operation of AIR-SEP® ION (softening) and AIR-SEP® VE (complete desalination) devices with residual capacity indication
- tank made of stainless steel for the storage of the expansion water, suitable up to a maximum of 95°C
- unpressurised tank, sealed to the atmosphere
- cavity cover for heat insulation
- overflow valve, pressure holding pump, quiet in operation
- electrical connection: 230VAC/50Hz

AIR-SEP® with 2 pressure holding pumps

**Pressure maintenance, degassing, expansion and resupply
with touch screen colour display - ALL IN ONE UNIT**

► Type AS-T 100/x-2 bis AS-T 2400/x-2 (up to 6,5bar)

- as before, but with **2 pressure holding pumps, quiet in operation**
- alternating operation (12/12h)
- pressure holding pumps can be shut off individually
- two separate suction lines with one stainless steel non-return valve (foot valve) each
- exchange of a pump in the running system possible
- as an option, parallel operation is possible in case the pressure falls below the minimum pressure
- 2nd pressure holding pump mounted beside the control unit
- electrical connection: 230VAC/50Hz

AIR-SEP® vertical pressure holding pumps

**Pressure maintenance, degassing, expansion and resupply
with touch screen colour display - ALL IN ONE UNIT**

► Type AS-T 100/xx bis AS-T 2400/xx (up to 13,5bar)

- pressure maintenance units with control system AIR-SEP® SmartControl (operation via touch screen colour display)
- as before, but application area of a pressure maintenance > 6,5 bar to max. 13,5 bar
- vertical pressure holding pump, adjacent on an expanded base
- optionally available with 2nd floor-mounted pressure holding pump for alternate operation and/or parallel operation in case the pressure falls below the minimum pressure
- With power contactor and motor protection relay
- electrical connection: 380-415VAC/50Hz

AIR-SEP® Pressure maintenance, degassing, expansion and resupply with touch screen colour display – ALL IN ONE UNIT

► Individual control versions

- as before, but a combination of two AIR-SEP® pressure maintenance units of the same type
- 100% safety due to redundancy (1 overflow valve each, 1 pressure holding pump each and 1 control system AIR-SEP SmartControl each with serial interface to the internal communication)
- alternate operating mode (12/12h)
- the expansion volume can be split or also doubled by means of the 2nd unit
- the expansion volume can be further increased by means of the optionally available EB (expansion) tank
- parallel operation possible in case the pressure falls below the minimum pressure
- the pressure maintenance units + EB tanks have to stand next to each other and on the same level
- connection with each other on site
- electrical connection: 2x 230VAC/50Hz (ideally 2 separate phases)

Example:

A pressure maintenance with 100% redundancy is required, pressure maintenance: 2.5bar, calculated expansion amount: 360 litres

You choose: 2x AIR-SEP® Type AS-T 400/6 + communication (master/slave) + connection accessories
(2 pressure holding pumps, 2 overflow valves, 2 AIR-SEP® controls, 2x expansion volume à 400 litres)

We plan your individual concept for pressure maintenance, expansion, degassing and resupply together with you.
Please contact us!

AIR-SEP® Expansion vessel to adapt to a larger expansion volume

► Extension: expansion tank AS-EB

- additional expansion tank (EB) to extend the pressure maintenance units AS-T 200/xx up to AS-T 2400/xx
- tank made of stainless steel for the storage of the expansion water, suitable up to 95°C
- unpressurised tank, sealed to the atmosphere
- one cleaning opening (Z4) per tank is required
- the pressure maintenance units + EB tanks have to stand next to each other and on the same level

AIR-SEP® Extension KIT: Heating/Cooling

► Heating / Cooling KIT

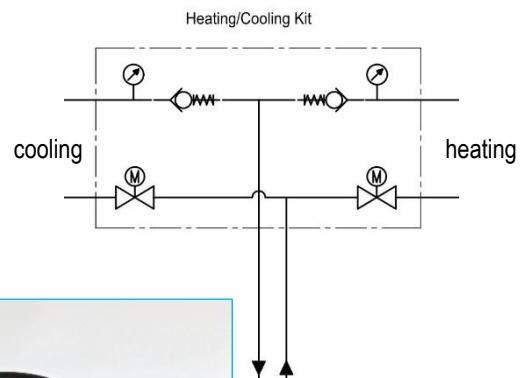

The AIR-SEP Heating/Cooling KIT is used in systems with heating and cooling functions (change over / 4-pipe system).

For this application, only 1 AIR-SEP Pressure Maintenance unit is required!

Both circuits are monitored individually (while maintaining all function such as pressure maintenance, expansion, degassing und make-up).

consisting of:

- 2x 2-way motor valve
- 2x check valve, stainless steel
- 2x pressure meter (1x from AIR-SEP unit)
- 1x electrical box with connectors
- 1x special program

	item no.	weight kg	catalogue price kr
Heating/Cooling KIT DN15 (for AS-T 20/x and AS-T 48/x)	KIT04	2,5	24 300
Heating/Cooling KIT DN25 (for AS-T 100/x up to AS-T 2400/x)	KIT03	3,5	27 814
Heating/Cooling-KIT DN15 with Fail-Safe-Kit for AIR-SEP Typ AS-T 20/48 (4 motor valves with fail safe)	KIT14	6,0	42 180
Heating/Cooling-KIT DN25 with Fail-Safe-Kit for AIR-SEP Typ AS-T 100-2400 (4 motor valves with fail safe)	KIT13	10,5	54 141

For explanations of the "Fail-Safe-Kit" see below.

► Resilience / Fail-Safe-Kit's

The AIR-SEP Fail-Safe-KIT is used in systems with high security requirements, f.e. in systems without a connection to the wastewater. In case of an accident or failure, the pressure maintenance is completely decoupled from the system.

Thus, f.e. a defective drinking water heat exchanger cannot overfill of the AIR-SEP device and flooding the technical room.

KIT11
Fail-Safe-Kit DN25

	item no.	item description	catalogue price kr
Kit 12	KIT12	Fail-Safe-Kit DN15 for AIR-SEP type AS-T 20/48 2x 2-way motor valves 1/2" with fail-safe, 1x special program	16 200
Kit 11	KIT11	Fail-Safe-Kit DN25 for AIR-SEP type AS-T 100 up to 2400 2x 2-way motor valves 1" with fail-safe, 1x special program	20 600

Also available with the "Heating/Cooling-KIT" (see above).

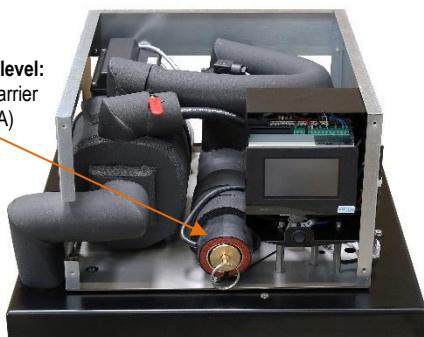

► **Accessories / Options ***
for cooling and refrigerating plants**

- **AIR- SEP® pressure maintenance units** can be used in cold water circuits as well as in circulating systems with glycol/water mixtures
- **in case of media temperatures below +14°C we recommend our insulation with vapour seal (accessory 5....)**
- PE storage tanks with glycol lifting pump store glycol/water mixtures for a fully automatic resupply, actuated via the AIR-SEP® unit

AIR-SEP® ION - compact softening device according to VDI¹ 2035 page 1

► AIR-SEP® ION

Water softening device for the treatment of make-up water in closed heating or cooling systems. Protection from calcification in heat generators and hot-water heating systems according to VDI 2035 page 1. The water softening is affected through the ion exchange technique using cation exchange resin of highest quality.

consisting of:

- 2x PP case with transparent filter bowl
- 2x softening resin cartridge
- 1x wall bracket

soft water capacity: 12,000 l x °dH

throughput max.: 400 l/h

operating gauge pressure permissible: 2-8 bar

operating temperature permissible: 5-40 °C

connections: DN20

AIR-SEP ION
with accessory 1 (optional)

AIR-SEP® VE - compact complete desalination device according to DIN EN12828

► AIR-SEP® VE

Complete desalination device for the treatment of additional water in closed heating and cooling systems according to the manufacturer's specifications or to DIN EN 12828 respectively.

Desalination is affected through the ion exchange technique using high-performance mixed bed exchange resin of highest quality.

consisting of:

- 2x PP cases with transparent filter bowl
- 2x desalination resin cartridge
- 1x wall bracket

desalination capacity: 3,600 l x TSC²

desalination level up to: 10 µS/cm

total hardness: 0.11 °dH

throughput max.: 240 l/h

operating gauge pressure permissible: 2-8 bar

operating temperature permissible: 5-40 °C

connections: DN20

AIR-SEP VE
with accessory 1 (optional)

AIR-SEP ION softening fitting	ION	310 x 600	600	6,5	6 700
Replacement cartridge ION (2 pcs.)	IONEK	2x 75 x 75	510	3,0	2 065
AIR-SEP VE desalination device	VE	310 x 600	600	6,5	7 850
Replacement cartridge VE (2 pcs.)	VEEK	2x 75 x 75	510	3,0	3 380

The system separation required by DIN EN 1717 / DIN 1988 is included in the optional „Accessory 1 – freshwater connection“ (see page 8).

¹ VDI = Verein Deutscher Ingenieure = Association of German Engineers;

² TSC = total salt content

AIR-SEP® Dimensioning Table

This dimensioning table allows you to quickly choose the required type of unit. All values indicated are maximum values.

For example, type AS-T 20/x can be operated in a radiator system of up to 50 kW (flow/return 80/60°C). In case of a system content of more than 900 litres, the model next in size – here type AS-T 48/x – shall be chosen.

Please also observe the respective pressure stages. The maximum values (static height/pressure maintenance) are indicated in **BOLD** letters in the price table. (Dimensioning is done according to the mixing temperature).

AIR-SEP® Type (max. expansion volume)	RADIATORS		FLAT RADIATORS		FLOOR HEATING		COOLING-/REFRIGERATING SYSTEMS	
	12 litres / kW	9 litres / kW	9 litres / kW	18 litres / kW	18 litres / kW	10 litres / kW	cool water	antifreezer
	80 / 60°C	55 / 45°C	80 / 60°C	55 / 45°C	35 / 25°C	kW	content	content
AS-T 20/x (20)	50	900 1.700	50	900 1.700	50	2.800	2.800 1.400
