Recognized as a Startup under DIPP, India, Member of SAP Startup Focus Program, IBM Global Entrepreneur Program, NASSCOM 10,000 Startups

Contracts Data Mining (CDM)

Solution helps to identify outliers in the P2P as well as O2C process. We call it a 4P matching process for audits (internal/external) i.e., Contracts (extracted insights), POs, Invoices and GRNs/Material Receipts.

- Extracts data from PDFs/Images by proprietary IT solution from contract documents using commercially available/open-source OCRs.
- Automates the process of reconciliation of Invoices & Contracts using statistical models.
- Enables rich visualization of outcome for better decision making.

Financial Statements Analyzer (FSA)

Solution provides real-time dynamic dashboards to the management to understand financial stability and the growth path of their organizations.

- Derive Insights by linking your P/L and B/S
- Data Mining from Financial Statements – What-If Simulation from Clustering, Classification and Regression to help auditors and P/L teams
- Complement your A/R, A/P and Spend Analytics

Blockchain Analytics as a Service (BaaS)

Solution to meet the growing demand for an integrated platform that provides a convenient way to trace blockchain transactions (like networks audit analysis) across various business functions.

- Provides an enterprise level of analytics stack which can integrate with multiple blockchain platforms such as Ethereum, Hyperledger, R3 Corda, etc.
- Supports real-time analysis of encrypted transactions for non-compliance, fraud, contractual exceptions, urgent escalations to contractual parties involved, etc.

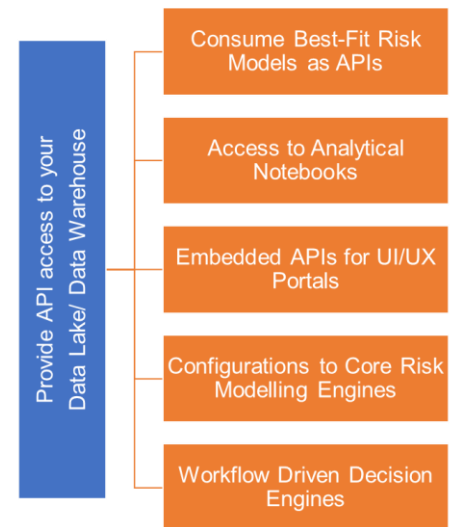

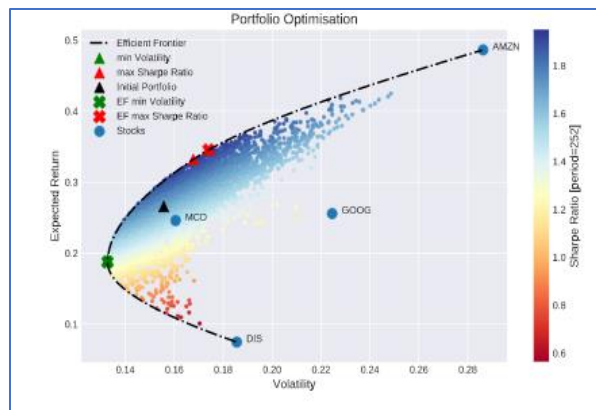

BUSINESS IMPACT

- Improves firm's performance by comparing outlier patterns from financial statements
- Compare the financial ratios and investigate the predicted trends
- Forecast your balance sheet drivers in real-time
- Perform asset projections and funds requirements
- Be ready for internal or external audits at any instant

Design Thinking using KPIs

- ✓ Our design thinking led solution development approach is aligned with our core "customer engagement strategy" defined by - *Agility (in Delivery), Speed (in Operations) and Innovation (in Solutions)*
- ✓ Our Digital Consulting Strategy looks at 3 broad factors that contribute to CxO Dashboards - *Assets/Utilization, Workforce/Productivity and Customers/Revenue Growth*
- ✓ Factory Model Development - *5P Model (an adapted agile scrum framework) acting as a DNA in the solution development life cycle*

Run Risk Analytics on a single integrated instance (cloud/on-premises)

Engagement Model

- On demand services partner - OPEX mode of technology transformation
- Lower TCO by adopting Public Cloud, Open Source, Rapid Application Development (RAD)
- Act as customer's extended technical R&D labs
- Partnership with SAP, IBM, Microsoft, Google & AWS
- digital platforms

Finance Solution Accelerators

- Financial Data Forecasting
- Enterprise Risk Analytics
- Robotic Process Automation (RPA) for Supply Chain (P2P/O2C) operations
- Supply Chain (P2P/O2C) Analytics
- Financial Chatbots on Banking APIs
- Smart Contracts Analyzer
- Reference Data Management
