

press release

# JULY 23, 2021

## Cal-Fire Approval

Cal-Fire approved applications of Silvertip Towers' E-115 Nochar Gel – this is an advanced technology that will significantly decrease the amount of water required and dramatically increase the efficiency of water as a fire extinguishing agent.

## Nochar Gels

Liquid Polymer Gels (ie. Firewall II™) are the fire fighting project of the future. Gels are a superior fire suppressant, compared to other retardants, like dry powder gels, Long-Term Retardants, Class A Foam, and water.

## Infrastructure Protection

Weed, CA Pumphouse

Silvertip Towers' application process builds a strong defensive fire break surrounding coating for critical infrastructure and residential dwellings.

## Residential Protection

Silvertip Towers' new single tower system provides homeowners with the same effective firebreak for dwelling protection. Silvertip Towers can install multiple locations around the perimeter of a property or multiple properties to provide maximum fire protection.

### Single Tower System

Mount Shasta RV Resort in Weed, CA

### Firewall II

The dramatic increase in the amount of water that is actually caught in the fuels creates a thick film coating that is two to five times thicker than LTR, and this is what is responsible for the stunning knockdown and suppressive effectiveness of Firewall II.

## Siskiyou County

Black Butte and Pumphouse in Weed, CA
