

Making your Plug Blink

1. If your Plug is not blinking when it is first installed, you must set it to pair mode.
2. To do this, ensure your plug is on (the indicator light should be blue), hold the power button down for 5 seconds until you hear a click, let go of the power button and then press the button once to activate
3. Once it starts blinking red, it is now ready to be paired with your phone.

WARNING! Risk of injury!

There is a risk of injury caused by inadequate supervision of electrical appliances that

- Cannot be operated without supervision
- Could cause a fire or damage if they are accidentally turned on accidentally (this applies particularly to appliances that heat or waste heat (e.g. fridge, hair straightener, iron) or appliances with rotating parts.
