THE ULTIM8 COMPARISON

1. COLOUR FADE RESISTANT

ULTIM8 Decking is designed to have a slight natural fade to mimic the natural look & feel of timber. It will maintain its natural colour over the life of the deck.

2. MOULD RESISTANT

ULTIM8 Decking is resistant to mould & mildew. Given the right conditions, mould will grow on any surface it lands on. If mould or mildew develops on ULTIM8 Deck it can be cleaned by following the ULTIM8 Deck cleaning and maintenance guide. Mould and mildew may cause the core of composite decks to deteriorate once it reaches the decks core. Due to its high-quality dense core, mould and mildew will not form in the ULTIM8 Decks core.

3. TESTING & COMPLIANCE CERTIFICATION

ULTIM8 Decking is tested and certified by independent 3rd party labs in Australia to ensure its structural integrity. It has been approved to span 450mm from centre to centre for residential use. It has been designed and tested to comply with the relevant Australian building standards, codes and laws (BCA).

4. EXTREME TEMPERATURE PERFORMANCE

ULTIM8 Decking is designed and certified to maintain its structural integrity & perform safely at -20°C to +50°C.

5. NATURAL LOOK & FEEL

ULTIM8 Decking is designed to look and feel like natural hardwood timber when touched.

6. FIXING & INSTALLATION

ULTIM8 Decking can easily be installed using regular timber deck screws, just like a hardwood timber deck, without the need for any special clips or screws. It can be cut, drilled, shaped and machined similarly to natural timber. This means the design possibilities are endless. If a hidden fixing system is required, we recommend the Cam system. Check your local hardware store for availability.

7. HIGH MOISTURE AREAS

ULTIM8 Decking is ideal for wet areas or high moisture areas and will not be affected if temporarily submerged from time to time.

8. GOUGING & SCRATCHES

Just like a natural timber deck, gouges and scratches can easily be sanded out, returning the deck to its natural look

& feel.

9. STAINS & SPILLS

The ULTIM8 Decking resists most regular stains and spills such as mustard, ketchup, oil, fat, red wine, soft drinks and food spills. Simply spray with a quality household cleaner and scrub in the direction of the grain, wash off with clean hot water. Do not use cleaning fluids that contain bleach or strong acids as it may damage your ULTIM8 Deck. For more difficult stains, refer to the ULTIM8 Deck Cleaning and Maintenance Guide for more information.

10. HOT SURFACE

Similar to an Australian hardwood deck, ULTIM8 Deck may get hot in direct sunlight and hot environments, though typically less so when compared with PVC Cap Stock composite decks.

11. LOW MAINTENANCE

ULTIM8 Decking is a low-maintenance alternative compared with regular timber decking, as no sealing, oiling, or sanding is required. ULTIM8 Decking avoids making exaggerated claims of being "Maintenance Free". Regular cleaning will be required to maintain your decks good looks, as with any outdoor decking product.

12. EXPANSION AND CONTRACTION

ULTIM8 Decking can be installed with a small 5mm gaps between boards end-to-end and is designed to minimize expansion and contraction in most areas.

13. COMPOSITION

ULTIM8 Decking uses a completely non-porous, high-density material with a consistent density throughout the whole profile.

14. TERMITE & INSECT RESISTANCE

The ULTIM8 Deck has a super dense core and is therefore resistant to termite and insect attacks.

15. WET AREAS

The ULTIM8 Deck is ideally suitable for use around wet areas such as indoor or outdoor pool areas, saunas, spas and walkways. See the cleaning and maintenance guide on our website.

16. WARRANTY

The ULTIM8 Decking comes with a 15 Year Limited Warranty.
