Findings

Distraction Index (DI): Right DI = 0.31, Left DI = 0.50.

Osteoarthritis (OA): No radiographic evidence of OA for either hip.

Cavitation/Other Findings: No cavitation present.

Interpretation

Distraction Index (DI): The laxity ranking is based on the hip with the greater laxity (larger DI). In this case the DI used is 0.50.

OA Risk Category: The DI is between 0.50 and 0.69. This patient is at moderate risk for hip OA.

Distraction Index Chart:

BREED STATISTICS: This interpretation is based on a cross-section of 578 canine patients of the PERRO DE PRESA CANARIO breed in the AIS PennHIP database. The gray strip represents the central 90% range of DIs (0.28 - 0.76) for the breed. The breed average DI is 0.52 (solid square). The patient DI is the solid circle (0.50).

SUMMARY: The degree of laxity (DI = 0.50) falls within the central 90% range of DIs for the breed. This amount of hip laxity places the hip at a moderate risk to develop hip OA. No radiographic evidence of OA for either hip.
