

Metatron Technology™ Theory

Metatron Technology™ diminishes the negative effects that man-made electricity and electronics have on the human physiology.

In the last 150 years, our brilliance has produced thousands of marvelous inventions and innovations, though sometimes at a steep cost. In the case of electricity, electrical appliances and electronic equipment, the most devastating side effect is an inaudible noise that has an agitating effect on our human physiology and negative effects on our environment.

Historically we've held a perception that the speed of light is a stable platform. As a result, this has been the reference of most inventions, particularly those powered by electricity. Today we know much more. Physics has determined that the speed of light is neither constant nor a stable platform.

In fact, physics has determined that the Unified Field is the ultimate stable platform, and all of nature, including man, is referenced to the Unified Field. Living and working in unstable fields pulls us off our stable Unified Field reference. This situation contributes significantly to most of our societal problems.

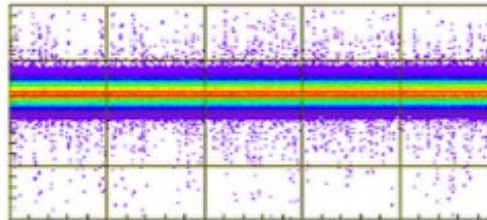

Attempting to deal with the multitude of individual problems on the level of the problems is not the solution. The solution is to correct the instability at its source. The developer of Metatron Technology™ has discovered how to bring the reference of manmade electricity back to the stable Unified Field, thus creating an environment that maintains our natural reference.

The problems caused by this instability will, in most cases, disappear with the application of Metatron Technology™, and, in other cases, be more responsive to resolution at the level of the problem.

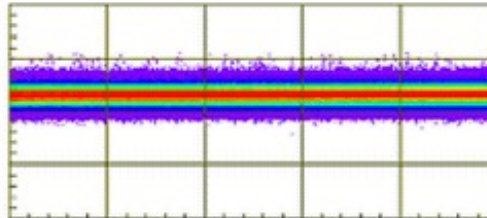

Demonstrating the Difference

Using the Windows 2000 Operating System

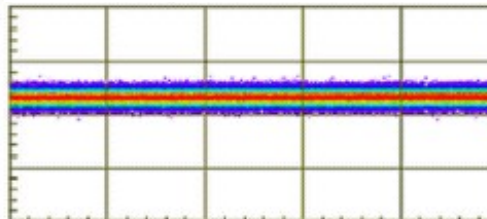

Computer test #1 without Metatron Technology™ shows considerable audio noise

Computer test #2 with Metatron Technology™ shows immediate reduction of audio noise

Computer test #3 with Metatron Technology™ 170 days after installation

**Metatron persisted voltage square-wave
from Software function generator
Frequency: 7.8 Mz for 20 minutes**

Measuring the Difference

Data shown in the three graphs to the left provides measurable support for reported energetic “re-ordering” effects attending the use of Metatron Software™. The considerable audio noise is reintegrated back into the audio signal which translates into a more comfortable environment around the computer as well as more information being available to the user.

Computer test #1 baseline data shows typical audio response for the lab PC and ancillary loads prior to installing the Metatron Software™.

Computer test #2 and #3 both have Metatron Software™ installed and use the same parameters and protocol as test #1.

The data for test #2, gathered immediately after Metatron Software™ installation, shows a clear modulation in noise amplitude and signal response. Audio step response is improved by 1.16 usec. (8%) over test #1. This converts to higher harmonic content in the audio performance. Noise content is reduced by + - 80 mv over the baseline. This converts to improved signal to noise ratio in the audio performance.

Computer test #3 data, as seen in the graph to the left, demonstrates significant improvement continues over time for each test parameter. Comparable improvements were found with the power signal as well. Visit our web site for further research findings.

Measurements were taken with:

- 1) 45 KVA Powerstat Vatriac (AC Source)
- 2) Norma D6100 6 ch. Power analyzer
- 3) LeCroy LT364L 4 ch. 500 Mhz Digital oscilloscope
- 4) LeCroy AP015 50 Mhz Current probe
- 5) LeCroy PP006 500 Mhz Voltage probe
