

Spring Planting

The trees are budding; the tulips and daffodils are starting to bloom. The days are getting warmer. I have spring Fever! What can I plant?

- ❖ Pansies, snapdragons, and petunias are very cold hardy. They are safe to put out early. The temperatures actually make them stronger.
- ❖ Perennials can go out any time. Make sure that they have been hardened off if it is still cold outside. Hardening off means that they should be acclimatized to the weather outside before you plant them.
- ❖ Grapes and berries are also safe to plant. We receive our starts in March. It is an ideal time to plant berries and grapes.
- ❖ Hardy and Semi-Hardy Veggies (March- May). These vegetables actually prefer the cooler weather.
 - Broccoli
 - Beets
 - Brussels Sprouts
 - Cabbage
 - Carrots
 - Cauliflower
 - Kohlrabi
 - Lettuce
 - Onions
 - Parsnips
 - Peas
 - Potatoes
 - Radish
 - Spinach
 - Swiss Chard
