_____

PRIMATTEAI OFX INSTALLATION GUIDE
_____

1 MacOS
=======

  The object file name of PrimatteAI OFX version is PrimatteAI.ofx.
The
  node name is 'OFX PrimatteAI'. Unzip the software package
  PrimatteAI_xx_xx_MacOS.zip in a folder such as ~/Downloads. "xx_xx"
  shows the version number.

  A new folder "ofxPrimatteAI_MacOS" is created in the folder. Open
the
  terminal window and change the directory to the working folder. If
  you use ~/Downloads, go to the ~/Downloads folder by typing "cd
  ~/Downloads" and follow the below commands:

  $ cd ofxPrimatteAI_MacOS
  $ ./install.sh

  You will be prompted the super-user password.

  ./install.sh command expand the plug-in files to a directory and
  change the extended attribute if needed. If there is no extended
  attribute attached to the file, you will see some error messages but
  you can ignore them.

2 Linux
=======

  Unzip the software package PrimatteAI.ofx.bundle.tgz and copy the
  folder structure to the proper folder and Restart the host
  applicationw.

  $ cp -r PrimatteAI.ofx.bundle /usr/OFX/Plugins(varies depending on
the linux environment)

  If the destination directory is owned by the superuser, use sudo
  command.

  $ sudo cp -r PrimatteAI.ofx.bundle /usr/OFX/Plugins
  Password: _____

Note (for flame users): The plugin folder of the linux flame might be
  defined as an environment variable OFX_PLUGIN_PATH. If the
  environment variable is not defined, you can make the directory
  "/usr/OFX/Plugins".
