Transfer paper Instructions

Dark transfer paper	<ol style="list-style-type: none">1. Print the image.2. Trim away excess.3. Separate grid liner and transfer paper.4. Lay the transfer paper on the shirt.5. Cover with Teflon paper6. Press for 10-12 seconds at 350 F
Light transfer paper	<ol style="list-style-type: none">1. Print the image in reverse.2. Trim away excess.3. Lay the transfer paper on the shirt.4. Cover with Teflon paper5. press for 30 seconds at 375 F.6. Peel the paper off the shirt while it is still hot.
Sublimation transfer paper	<ol style="list-style-type: none">1. Print the image.2. Trim away excess.3. Separate grid liner and transfer paper.4. Lay the transfer paper on the shirt.5. Cover with Teflon paper6. Press for 10-12 seconds at 350 F
Laser transfer paper	<ol style="list-style-type: none">1. Print the image.2. Trim away excess.3. Lay the transfer paper on the shirt.4. Cover with Teflon paper5. Press for 30 seconds at 350 F6. Allow to cool and then peel the paper off the shirt

3- HEAT PRESS MACHINES SECTION

1. Do I Need an Auto-Opening Clamshell Heat Press or Manual Heat Press?

This is one of the most important questions that you can ask yourself before starting this business.

Automatic press: The upper plate opens automatically when the timer that you have set is over. This sounds an alarm at the same time. The automatic feature on this heat press saves you time and money. You do not risk burning the material you press. Also, you do not have to wait for the count-down process so you can prepare your next item while pressing the first.

Manual model: allows you to adjust the pressure so that you can feel the difference between the light, medium, and firm. But you must manually open and close the heat press after every item.

If you plan to use your machine a lot, you might want to consider the automatic models.

2. WHAT TYPE OF HEAT PRESS MACHINE DO YOU sell?

We have:

- Manual Heat Press 15" x 15"
- Auto Opening Clamshell Heat Press – 15" x 15"
- Manual Heat Press 16" x 24"
- Auto Opening Clamshell Heat Press – 16" x 24"
- Cap Heat Press Machine
- Mug and Cup Heat Press Machine

3. How much power do I need for a heat press machine? Can I plug it in at my house?

All of our heat press machines pull anywhere from 15 amps and use a standard 110v US outlet.

5. Can I plug something in the same circuit as my heat press machine?

Yes, you can plug in something like a vinyl cutter, laptop, or desktop with the heat press. But do not to plug anything on this circuit like another heat press machine, iron, water boiler, heater etc.

6. How do I know what to set the temperature and time for on my heat press?

You can follow our recommended list of temperatures and press times for our vinyl. We also have YouTube videos on how to set the temperature if you are a visual learner.

7. Do I need to do any assembly for my heat press machine?

No, our heat press machines are ready to plug in.

8. How Can I set up my Heat Press Machine Pressure?

All of our presses change the pressure by turning clockwise a knob on the press. If you want to set perfect pressure you have to close the top plate, and turn clockwise the knob on the press. Be sure that your pressure is adjusted to deliver the recommended pressure that the transfer requires. The pressure is a guessing game on a lot of heat presses it is adjusted and measured strictly on how it feels to the operator.

9. If I am not using my heat press should I leave it opened or closed?

That is good question – it depends on you, but we recommend leaving the press in the open position to protect from any unfortunate accidents.

10. I plug in my heat press machine and turn it on, but it is not heating up?

In this case, you must check for two things.

- a.) After turning on your heat-press machine, you must push the orange button on the screen.
- b.) You must check your stop button on your heat-press machine, and you must turn right to deactivate the stop button.

11. After I press my t-shirt my heat press machine temperature is going down Why?

This is completely normal. When the hot surface touches the cold surface, the heat press is going to lose heat (between 5°F - 12°F). Just wait for a moment to let it heat back up.

12. What is the maximum temperature for the Laviva heat press machine?

The maximum temperature for the Laviva heat press machine is 450°F but we do not recommend this temperature for any kind of press and it will affect your machine life.

13. How long is the warranty period on Laviva Heat Press?

All heat press machines come with 1 year in house warranty. When you get any problem with heat press you can contact us via phone or email.

14. How long is the repair/service time for Laviva Heat press machine?

Generally, it takes 1-3 business days, but it depends on issue.

15. How long does it take to reach the maximum temperature?

Generally, it takes 15-20 mins.

4- Printers & Accessories section

How often do you have to replace the blade for Silhouette?

Depends upon how often you use it and what materials you are cutting. We have had some last much longer than others, simply because we were using it more and/or cutting thicker materials.

Does Cameo 3 blade work on the Cameo 4?

No Cameo 3 blade is not compatible with cameo 4.

How often (or after how many uses) do you seem to replace the cutting mat?.

They last a long time with proper use usually 5-6 months but if used very often the adhesive on the mat will not be as sticky. If your vinyl is no longer sticking to the mat You can clean the mat and spray with a repositionable adhesive.

What is a ratchet blade used for?

Except for fabric, the ratchet blade is used to cut all materials, ranging from paper to vinyl to stencil material, in the CAMEO and Portrait. It is used on the same materials in the CURIO.

What is a inkjet Transfer paper?

Inkjet Transfer paper allows you to create something on your computer, print it on this paper in your Ink Jet printer, and then transfer the artwork to fabrics or other surfaces. You can use this paper in almost all Ink Jet printers. Dark Transfer is used for color fabric, Light transfer is used for white fabric only.

Do the shirts have to be 100% polyester for sublimation?

Shirts for sublimation need to be at the very least, 65% polyester. The higher percentage of polyester the better as the ink will only transfer to the poly fibers.

What is the difference between Inkjet Transfer paper vs. Laser jet paper?

Inkjet Transfer paper can only be used in inkjet printers and Laser jet paper on Laser printers. Inkjet Transfer Dark paper can only be used on color fabric, Light on white fabric. Laser jet Transfer paper can be used on all color fabric.

How to install silhouette software?

Navigate to [**silhouetteamerica.com/software**](https://silhouetteamerica.com/software)

Click “Download” Once the software has finished downloading, click Open.

Follow installation instructions as prompted by your computer and register your machine. You must register your machine if you want to use the warranty. For Technical support with silhouette the customer must contact silhouette America. The warranty is provided by silhouette only.
