

REDUCE RISK WITH PREDICTABLE OUTCOMES

When issues or abnormalities arise, you can quickly engage our team of experts to ensure system stability and availability.

RadixTrie offers specialist database, change data capture (CDC) replication and data analytics support. If you're running Oracle, Microsoft SQL Server, PostgreSQL databases, or using GoldenGate, Attunity or Qlik Data Integration Platform for data replication, we can help.

Whether you have a simple deployment with basic needs, or a mission critical estate with complex high availability requirements, RadixTrie is the right choice to fit your business goals and your budget.

We offer a **premium level of service** to all our customers, whether you are an SME or a major corporation. Our offerings scale from smallest business needs right up to the largest, complex enterprises.

All of our offerings include:

- 24/7 support;
- All projects included;
- Flexible pricing that adjusts as your estate changes;
- A team of senior experts always available;
- Proactive assessments and improvement initiatives ;
- A service delivery manager; and
- Access to the service desk.

ABOUT RADIXTRIE

When it comes to databases, there is no 'one size fits all' solution. We'll work with you to design and build custom, agile data solutions that fit your business and your budget. Our nimble approach involving people, process and technology ensures that your IT investments deliver ROI and support strategic decision making.

The RadixTrie team has over 200 collective years of experience in managing, securing and optimising database environments. Supported by the wider Obsidian Group, we draw on a vast range of skills to deliver agile purpose-driven solutions. Our data management competency includes Microsoft SQL Server, Oracle Database, GoldenGate and WebLogic, PostgreSQL and Qlik.
