

THE DBA IMPACT

Impressive Oracle Improvements

FEATURED DBA

Zeyn Pahad
Domain Lead: Oracle

“One of our customers was struggling with users experiencing inconsistencies with some services due to a large take-on by our client.

After conducting a thorough investigation, we pinpointed the core issues, which were linked to specific database queries causing performance bottlenecks.

We embarked on a series of strategic actions, including the implementation of table partitioning, index partitioning, and meticulous table reorganisation. These efforts were successful, resulting in dramatic performance improvements. But more importantly, the improvements remain **consistent**.

We still endeavor to improve performance and provide consistency across the environment.”

| Business Process # | Seconds to Complete Before DB Maintenance | Seconds to Complete After DB Maintenance |
|--------------------|---|--|
| 1 | 10 | 2 |
| 2 | 5 | 2 |
| 3 | 223 | 13 |
| 4 | 283 | 2 |
| 5 | 360 | 2 |

Percentage Increase in Performance After Database Maintenance
