High Volume Automated Digital Signatures

eSealing with eSigner

Prevent unauthorized changes to sensitive documents, prevent document fraud and build trust with customers at scale.

eSealing

eSealing is the process of applying cryptographic signatures to documents automatically and at scale so that all documents distributed at high volumes are protected against fraud and identify the organization that created the document.

eSigner

eSigner is a remote cloud signing service from SSL.com that applies legally-binding, Adobe-trusted digital signatures to documents. Digital signatures from eSigner apply a cryptographic seal to a document that displays a verified identity in PDF readers and ensures documents have not been altered.

Key Benefits

- Valid & Trusted Signatures - Creates legally-binding digital signatures containing a validated company identity recognized across all Adobe applications.

- Bulk Processing - Sign unlimited documents in one batch, eliminating inefficient individual signing

- Top Security - Cryptography safeguards document integrity and prevents unauthorized changes

- Simple Integration - Effortless APIs and tools allow automation of high-volume signing

- Less expensive than individual contract workflow services like Docusign or HelloSign

Use Cases

- eSeal invoices to prevent tampering and fraudulent payments
- Prevent identity fraud with an embedded cryptographic company identity in all automatically generated documents
- Integrate Adobe-trusted digital signatures into your document workflow software with robust signing APIs
- eSeal high-volume contracts, agreements, purchase orders and more.
